MULTIWALL POLYCARBONATE INFORMATION & KNOW-HOW

This information is a broad overview for a working knowledge on Multiwall sheeting. Each sheet will be slightly different due to its structure and resin composition and individual data sheets should be consulted if any doubt of the product's suitability for use.

Multiwall polycarbonate sheeting is a versatile, easy to cut, lightweight, high-impact resistant, insulating and fire resistant product (most have an AA Fire Rating to BSI Standard 476 or its equivalent in the country of origin). Ideal for roofing or vertical wall cladding applications, and used in many other applications such as set design.

SHEET SPECIFICATIONS

3.1

"U" VALUE

INSULATION—The U Value is the measure of heat transfer through the sheet. The lower the number, the less heat is transferred—better insulation and lower fuel bills!

UV

PROTECTION

UV PROTECTION—The outer face of the sheet has a special coating to prevent degradation by natural UV sunlight. UV stabilised increases a product's life span.

1.5

KG/sq.m

WEIGHT—Shown per 1M² As the weight of the sheet increases, generally the level of rigidity will also increase.

MIN

SUNLIGHT

MIN

VISION

SUNLIGHT AND VISION — A summary of the sheet's amount of sunlight penetration and the amount of vision it allows through the sheet.

HEAT

SHIELD

PROTECTION

HEAT SHIELDING — Sheets with this symbol have a special coating designed to reduce heat, providing a cooler space below the sheet.

LIGHT TRANSMISSION —Manufacturer's measure the light that passes through their sheets. However, they use different tests in different laboratories and so real world comparison between them is difficult. This symbol is our own indicator as to the shading we feel they provide. Official figures can be obtained from the individual product data sheets.

Typical Sheet Usage

THICKNESS

NORMAL AREA OF USE

4mm	Basic Horticulture
10mm	Premium Horticulture
	Basic Open Structures
16mm	Open Structures
	Basic Enclosed Structures
25mm	Enclosed Structures
35mm	Heavy Duty Enclosed Structures
40mm	Prestigious Structures

and we will try to help there and then on the phone.

Sheet Expansion

EXAMPLE. 3M x 980mm SHEET

> Polycarbonate roof sheets must be fitted with a gap that allows them to expand with temperature changes.

> **AT THE TOP**—Allow a 3mm gap for each metre of the sheets length (this will be covered by a wall flashing).

> **AT THE SIDES**—Allow a 3mm gap between the sheet edge and the centre ribs of the Glazing Bar on both sides (An average bar centre spacing is 20mm wider than the sheet itself. A 980mm wide sheet allows bars to be set at 1M centres).

9mm expansion allowance for the top edge (3x3)

3mm expansion allowance each side

10mm TWINWALL POLYCARBONATE

Offers Quality with affordability

C & A's extremely popular home brand high quality sheeting. Made from pure polycarbonate material and combined with a light weight structure to allow for roofing on a budget but have more rigidity than 4mm twinwall sheets. All the colours admit various levels of light helping to reduce glare. These sheets are the perfect choice for low cost installations of open sided structures, canopies and gazebos.

This Clear sheet offers no real shade and reduces light by a small amount and has subtle rib lines across the width of the sheet

This sheet's gentle bronzed tint gives a good level of shade, reducing the sun's glare for roofs exposed to direct sunlight.

Opal sheets transmit some translucent light, but not sight, so provides privacy for overlooked roofs. It also immediately reflects some of the sun's heat.

Lexan* Tough Virtually Unbreakable
Polycarbonate Sheet

With world leading technology from one of the finest brands.

These sheets provide increased rigidity and a level of heat insulation that was previously considered unobtainable from a 16mm sheet. These qualities make this sheet ideal for a wide range of canopies and conservatories. Added to this these 16mm sheets have a maximum span (width) without needing extra support or purlins of 1000mm (see page 26 for more info) one of the best value roofing sheets on the market.

Lexan Tough
Polycarbonate Sheet
Virtually Unbreakable

C & A are proud to introduce these 25mm sheets with their cutting-edge technology. With insulation values better than some 35mm sheets, the number of finely divided cells also adds to the sheet's rigidity allowing wider spans between glazing bars (max 1200mm without purlins).

Another great factor to our 25mm sheet is, unlike the majority of other multiwall polycarbonate sheeting, it has anti-UV coating on BOTH SIDES of the sheet so it does not matter which way up the sheet is laid on the roof.

25mm HEATGUARD OPAL

SEVEN-WALL POLYCARBONATE

1.6 "U" VALUE	UV PROTECTION
3.1 KG/sq.m	HEAT SHIELD PROTECTION

This unique sheet is ideal for south-facing conservatories.

Manufactured using a high quality dual-extrusion process resulting in two layers of polycarbonate. The metalised top layer provides shade and reflects solar heat, whilst the bottom Opal tinted layer provides evenly diffused light below and reflects artificial light.

BONUS HEATGUARD OPAL

marlon Clickloc

Easy-Fit Polycarbonate Panel

EASY-FIT POLYCARBONATE ROOFING PANELS

Marlon Clickloc is an easy-fit roofing panel which provides the ideal DIY roofing solution for Verandas, Canopies or Car Ports. Requiring no glazing bars, the easy-fit panels simply click and lock together to provide an instant roof. Perfect for DIY use, only standard tools are required to install. Simply cut panels to the required length, screw into place, click and lock the next panel and repeat, then finish with a U profile. The panels are manufactured from impact resistant polycarbonate which is hardwearing, durable and long-lasting. This frosted sheet has added UV protection so that you can enjoy the great outdoors whilst being protected from the harmful effects of the sun.

Handling Sheets

> Polycarbonate sheets have temporary plastic cover films on their surface each side to protect them from marks or scratches.

> Plastic cover films also indicate which face is the upper side with the UV protection—this will normally be the film printed with writing.

> As it is almost impossible to otherwise tell the two sides apart, **DO NOT REMOVE** the cover film until the sheet is being laid on the roof.

Cutting Sheets

> Polycarbonate sheets can be easily trimmed using a fine bladed/ toothed handsaw. Power saws should be used with caution and are generally not recommended unless experienced in working with plastics.

> When cutting, support both sides of the cut and saw at a shallow angle with light pressure.

> For long cuts, overlay the approximate cut line with masking tape so an accurate line can be marked.

> Sheet debris from cutting can be removed from the cells with compressed air or a powerful vacuum cleaner.

Sheet Storage

> Polycarbonate sheets stored outside in the open must have sheet ends taped up to prevent insects, debris or moisture invading the cells.

> Stacks of polycarbonate sheets should be covered with a light proof sheet to prevent distortion by magnified sunlight.

+ WE ARE HERE TO HELP!

Simply call us on 01634 374444 or email cs@cabp.co.uk with any issues and we will try to help there and then. Most queries can be resolved in a single phone call.

Online Resources www.cabp.co.uk

Getting better information has become easier with the Internet, so if you require more information then take a look at our website where you will find various product information and data sheets with the products.

> **DATA SHEETS**—There is a wealth of additional information about our products, including Multiwall Polycarbonate sheeting, that can be found online on our website. Our data sheets can be found under a product's **documents** tab shown on each product's page. This will provide any further product details that we often have direct from the manufacturers themselves.

> **PRODUCT VIDEOS**—In addition to the product information we have written online, you can also view related videos found with the product. You will find a selection of guides and instructions to help with your installation.

Installation Guide & Assembly Video Online

VALE GLAZING BAR

THE SIMPLE SOLUTION FOR ALL FLAT SHEET ROOFING

- ▶ C&A's own design
- ▶ One-Size-Fits-All design
- ▶ Use with **ALL** flat sheet glazing roofing materials
- ▶ In **WHITE** or **BROWN**

The **VALE** Glazing Bar is a simple yet hugely popular product allowing users to join ANY glazing sheet material of ANY thickness, with a strong aluminium core and plastic capping. Initially designed for joining Glass panels on lean-to roofs, this bar has also proven very popular with the use of polycarbonate sheeting.

VALE GLAZING BARS

COMPRISING:
1x PVC Cover Cap, 1x Aluminium Core, 2x Primary Top Seals and 1x Base Seal

USE WITH ANY THICKNESS

The **VALE** Bar can accept any thickness sheet— all that is needed is a long enough screw! **The draw back** to this is care needs to be taken to ensure that the **VALE** Bar is not over-tightened which may cause damage to the glazing sheets. Once secured the PVC Cover Cap clips on ensuring that water can not enter the fixing channel or leak through the roof.

FIXING VALE BARS DOWN

Frames should be flat and stable, made of timber or metal and be at least 45mm wide. The Aluminium Core is screwed on top of the Base Seal every 400mm. At the lower (gutter) end of the roof, bars can overhang the Support Beam by 50mm.

BARREL VAULTED ROOFS

The **VALE** bar is ideal for use in barrel vaulted roofs where the structural frame is shaped to a curve. This is because the bar can be pulled to the correct curvature using the fixing screws to a minimum 3 metre radius curve.

RUBBER SEALS/ GASKETS

The **VALE** Bar is C&A's only Frame Supported Bar which uses rubber Gaskets. The bar consists of a Base Seal which is glued to the supporting beam/ timber, then the screwed down Aluminium Core which houses a further two Primary Seals.

ROOF EDGES/ END BARS

Due to the **VALE** Bar's ability to accept any thickness sheet, we do not supply an End Bar Infill as with our other Glazing Bar Systems. Instead, a packing piece (normally made of timber) is required on the open side of the end bar the same thickness as the glazing material to ensure the end bar is stable and rigid (Fig 1). If polycarbonate is being used the sheet can span across the entire bar, which can be fastened through the sheet itself (Fig 2).

Figure 1. End Bar when using glass sheet

Figure 2. End Bar when using polycarbonate sheet

EDEN GLAZING BAR

ALL UPVC
THE ECONOMY BAR

- ▶ **C&A** 's own design
- ▶ Frame Supported
- ▶ For 4mm, 6mm, 8mm & 10mm Polycarbonate sheets

EDEN Bars are 50mm wide.

The base section of our bars should be fixed every 400mm along its length. We recommend that only stainless steel screws should be used.

Our new EDEN frame supported glazing bar system for multiwall polycarbonate sheets is specially designed to be a **LOW COST** choice.

Manufactured entirely of UPVC with a rubber lipped top cap and base section, the EDEN bar has a single screw fixing through the front and includes drainage channels to allow for excess water run off.

Easy to assemble: simply screw base to supporting timbers and use the push clip system to secure the top cap

HAWK GLAZING BAR

- ▶ C&A's own design
- ▶ Frame Supported
- ▶ For 10mm, 16mm, 25mm Polycarbonate Sheets

The Glazing Bar aimed for the Trade, the *HAWK* Bar's design is simple yet strong with an Aluminium Base section.

The *HAWK* Bar is easy to install and visually unobtrusive with a slim 48mm wide base section and low profile PVC top cap.

C&A's well proven design of drainage channels and sealed centre sections for leak-proof fixings within the Aluminium Core are great features of the *HAWK* Bar.

HAWK GLAZING BARS

AVAILABLE IN WHITE ONLY

The base section should be fixed every 400mm along its length.

AVON

ALUMINIUM CORED

GLAZING BAR

- ▶ C&A's own design
- ▶ Frame Supported
- ▶ For 16mm, 25mm, 35mm & sheets
- ▶ In WHITE or BROWN

Our best glazing bar system for frame supported roofs. The Avon bar is a 3-piece construction:

1. Easy-fit UPVC top cap to secure sheet
2. Strong high-grade aluminium core with dedicated central channel for fixings.
3. UPVC base section to fully clad bar and add insulation.

The AVON glazing bar is thermally efficient due to the full UPVC capping that includes an insulating air gap in the base section. The bar also has wide side channels to drain moisture away, making this bar a top choice for roofing projects such as conservatories.

The AVON bar is 58mm wide to ensure wide fluted sheets are correctly secured and are available with two different cores for a range of sheet acceptance:

16mm & 25mm and **35mm** sheets.

PEAK 100 GLAZING BAR

- C&A's proven own design
- Self Supporting up to 4M*
- For 16mm and 25mm Polycarbonate sheets

The **PEAK 100** self-supporting glazing bar system is capable of spanning an impressive 4 metres and is also one of C&A's most complete designs with full UPVC capping, plus additional trims, flashing and structural components.

PEAK 100 Bars have a load-bearing high quality aluminium core, allowing the length of mono-pitch roofs to extend up to approximately 4 metres (*see spanning table on Page 23 for details). Other aluminium components of this system, such as the wall plates and beams/posts, also aid to its strength and durability and are concealed behind UPVC capping, which not only improves thermal insulation but that also make this roofing system visually attractive. Using the **PEAK 130** wall plate, the bars are connected to the host building with pivot mounts, whilst fixed at the other end to the **PEAK 60** beam/post.

YORK GLAZING BAR

SELF-SUPPORTS UP TO 4 METRE SPANS*

- ▶ **C&A's** own proven design
- ▶ Self Supporting up to 4M*
- ▶ For 16/25 & 35mm Polycarbonate sheets

Designed to satisfy a recent demand for thicker polycarbonate roof sheets that have the highest insulation standards.

These Self Supporting bars are strong enough to hold their own weight without any additional support. Use the Pivot Mounts to attach the Glazing Bars to a wall plate fitted on to the host wall, and fix the other to the front beam (gutter edge).

YORK Glazing Bars are available up to 6M in length for better optimisation when cutting to size, **(these are not self supporting)**.

The YORK system has been designed to cater for a wide variety of demands, from small span roofs where a lighter aluminium can be used to reduce cost, to large heavy duty aluminium for larger spans and thicker sheets.

> The System 7

Suitable for roofs with spans of up to 3M with 70mm high Aluminium Core.

> The System 8

Suitable for roofs with spans of up to 4M with 84mm high Aluminium Core.

*See spanning tables on Page 23.

SYSTEM 7 16mm Sheets

SYSTEM 8 25mm & 35mm Sheets

The **System 7** glazing bar has a 70mm high aluminium core and is the light weight version with spans up to a maximum of 3M. This makes the bar ideal for small roofs.

The **System 8** glazing bar has a 80mm high aluminium core and is the more robust version with spans up to a maximum of 4M without support and comes with the option of a 6M bar.

GLAZING BAR KNOW-HOW

Securing Frame-Supported Glazing Bars

EDEN, HAWK & AVON Glazing Bars utilise snap-down top caps. The base section should be screwed down every 600mm along the length through the sealed centre channel provided for fixings. This allows any water that may ingress under the top cap to run down the drainage channels on the sides of the bars.

The **EDEN & HAWK** bars must have structural support under their entire length, whilst the **AVON** with stronger aluminium core can span across purlins that are no greater than 600mm (approx. 2ft) apart. This makes them ideal as a replacement to corrugated roofs as the structure should not need changing if originally built correct and in good order.

Once the base sections are fastened to the support structure, the sheets are placed in position, ensuring the expansion gaps are included and that a vertical rib of the sheet will be encapsulated by the bar. The top cap is then pushed down into the base section and a set of retaining hooks holds the top cap in place. This can be done with a firm hand or by gently tapping with a rubber mallet. To ensure a seal, the top cap must have pressure on both sides to stop it from toppling over. Therefore if there is no sheet on one side, then a bar end Infill must be used in its place.

VALE glazing bars have a screw down top cap that is intended for the sealing (but not retaining) of glass units or solid polycarbonate. These consist of a rubber base gasket that need to be secured to the structural supports. The glazing is then placed on the base gasket and secured with a Retainer. The aluminium core section with rubber seals is then placed along the joint and fastened through the middle into the supporting structure every 300mm with the appropriate length stainless steel screw.

This should only be tightened until the gaskets are under a small amount of compression. once fastened the PVC top cover can be snapped onto the aluminium core, providing a thermal break and seal over the fixings. These bars can also be fastened to pre-rolled steel box section for the fabrication of barrel vaults.

Timbers for Frame Supported Glazing Bars

The size of the timbers will depend on many factors, including the weather conditions the roof is going to be subjected to and the quality of the timber used. **TABLE A** is a guide only. You must ensure that the support provided is suitable for your application.

TABLE A Timber rafter size guide (when at 1M centres)	LENGTH OF BAR ▼	SIZE OF TIMBER SUPPORT ▼	
		WIDTH	DEPTH
	2.0M (6' 6")	50mm (2")	100mm (4")
	3.0M (9' 10")	50mm (2")	125mm (5")
	4.0M (13' 1")	50mm (2")	150mm (6")
	5.0M (16' 4")	50mm (2")	200mm (8")

Sheet Width & Glazing Bar Spacing

The Polycarbonate sheet widths available (up to 2.1M) are much wider than they can span unsupported, but are available for better sheet optimisation when cutting. The distance between the timber supports for the sheets will depend on the sheet thickness, sheet structure, and the sheet's typical environment (this information can be found in the manufacturer's data sheets). **TABLE B** is a guide only for normal operating environments.

TABLE B Sheet spanning guide for Frame Supported Bars	SHEET THICKNESS ▶	6mm	10mm	16mm	25mm+
	MAX SPAN ▼				
	Without Purlins	600mm	700mm	1000mm	1200mm
	Purlins at 600mm	1000mm	1000mm	1500mm	1500mm

Cutting Bars & Securing Capping/ Beading

It is recommend to use hand tools when cutting our glazing bars. The aluminium and PVC sections can both be cut with a fine tooth hacksaw. When installing secure the PVC glazing caps/ beads by hand wherever possible. A rubber mallet can be used, but should be used with caution as to not cause damage.

Self Supporting Bars

PEAK 100 Bars for 16mm &, 25mm polycarbonate sheets on spans of up to 4M.

Designed for mono-pitch roofs with spans up to 4M, this very well proven glazing bar system has PVC capping on both the inside and outside for an attractive appearance and thermal insulation. An aluminium reinforced wall plate is used to secure the roof to the host building, whilst a PVC clad aluminium **PEAK 60** Beam with optional posts support the roof at the lower end. All fixings are stainless steel and where these are exposed to view, the fixings have colour matched plastic heads.

YORK Bars for 16, 25 & 35mm polycarbonate sheets on spans of up to 4M.

Designed for mono-pitched roofs, **YORK** glazing bars are available in two grades – The system 7 bar will carry 16, 25 and 40mm polycarbonate roof sheets up to spans of 3 metres, whilst the heavier gauge System 8 bar will carry 25mm and 35mm polycarbonate roof sheets up to spans of 4 metres. Designed to be quick to install with fewer components needed for each bar.

4.0M	N/A	700mm	700mm	1050mm

SANCTUARY Bars for 16mm polycarbonate sheets on spans up to 4M.

All-Aluminium construction, these bars are designed to be used with the dedicated wall plate and front beam of the system. These are then all riveted together to create a substantial framework.

Bar Drainage Channels

C&A bar systems specifically for polycarbonate sheets have a sheet retention system that secures the roof sheets and prevents the ingress of water without restricting the essential thermal expansion. Apart from the **VALE** Bar, all our glazing bars do not need rubber seals/ gaskets, which can weather over time and restrict sheet expansion. In extreme weather conditions strong winds may force small amounts of rainwater into the joint between the sheet and the bar's top cap which is why these bars have drainage channels immediately behind the joint leading down to the gutter.

Pivot fixings for Self Supporting Bars

Because of the drainage system designed in all of C&A's glazing bars, the **PEAK** and **YORK** bars have dedicated pivot mounting systems to secure the bars without compromising the drainage.

The head of the pivot mount is slid up the bar and secured from underneath, ensuring the channels are unaffected. The base is fastened to the wall plate or front beam, through the designated holes, and the two parts are linked together with a stainless steel pin.

By being assembled round the pivoting action of the pin, the bars can be set at any angle up to 45°. It should be noted that low pitch roofs can suffer from standing water and the water blow back, increasing the chance of water penetration. It is recommended that roofs should try to be set with a minimum 15° pitch wherever possible to minimise this.

Stainless Steel Fixings

When fixing to aluminium it is important that the correct type of fixing is chosen. Stainless steel has high strength and is very resistant to corrosion making it an ideal choice for any screws, nuts, bolts or pins - C&A mostly supply these.

Untreated steel will rust and weaken over time and although zinc-plated steel has a protective coating to help protect it from rusting, it unfortunately also reacts with aluminium, causing weakness. aluminium fixings do not suffer corrosion or reaction, but are not as strong as stainless steel.

SANCTUARY CANOPY SYSTEM *COMPLETE KITS*

- ▶ Verandas
- ▶ Carports
- ▶ Walkways
- ▶ Smoking shelters
- ▶ And more!

- ✓ Strong All-Aluminium framework construction.
 - Gloss white POWDER COATED ready to install.
- ✓ Durable 16mm CLEAR or Eco-White Polycarbonate sheets giving weather protection and shade.
- ✓ Hidden integral gutter within front beam and support posts that:
 - Minimise the space required for the structure.
 - Cut costs - no need for additional guttering.
 - Reduce risk of damage - no pipes to knock.
- ✓ Cavities in the bar, to allow for electrics to be concealed inside.
- ✓ Simple fixing system for speed and ease of installation.
- ✓ Kits come complete with Bolts, Screws, Rivets, Drill bits, Sealants, Installation guide and Rivet gun.

Additional Cost options:

- Alternative frame and sheet colours available to order. Call 01634 374444

SANCTUARY COMPONENTS

Glass Clear Solid Polycarbonate Sheets Replacement Parts Bespoke RAL Colours

Using the parts listed on this page you can select all the component's to build the roof to your requirements. You also have the option to use any 16mm polycarbonate roof sheets including Bronze sheets which offers some shade but does not block out as much light as the Eco-White sheets but more than the clear sheets. Our sanctuary roof system is designed by us and manufactured in the UK and has been an extremely popular canopy roofing system for many years. Should you require a canopy made to a specific RAL colour then we can cater to your design. There are many options available with our sanctuary system all you need to do is call us with details and we can prepare a quote for you.

FIXINGS AND ACCESSORIES

COMPONENT	PART	PRICE

CLEAR 3" CEMENT PROFILE PVC

3" profile sheeting is commonly used for a wide variety of roles in modern DIY. Uses include carports, greenhouses, chicken coops & garden covering - the list can go on. Available in 2 thicknesses **0.8mm** economy grade and **1.3mm** thickness trade grade. The thicker trade grade has increased strength and durability. This should allow the trade grade sheets to out live their thinner economy counterparts. All corrugated sheets are available from stock with a full range of accessories.

LENGTH	ECONOMY GRADE 0.8mm Thick		TRADE GRADE 1.3mm Thick	
	PART	PRICE	PART	PRICE
1.82M (6ft)	R56CL	£10.83	R106CL	£17.06

3.64M (12ft)	R512CL	£21.79	R1012CL	£34.27

3" CEMENT PROFILE GRP FIBRE GLASS

Fibreglass roof sheets have great strength and durability. They are commonly used as roof lights in agricultural and commercial buildings. Class 3, 1.83kg Grade is designed for domestic or light commercial use. These sheets admit light but not sight and are easily trimmed to size with a fine-toothed saw. Higher grade sheeting is available for use on industrial or commercial areas. **N.B. Class 1 & Class 0 sheets can be supplied to order.**

CLASS 3 (1.83Kg/M²)

LENGTH	PART	PRICE
1.82 (6ft)	RF336	£34.43
2.44 (8ft)	RF338	£45.91
3.04 (10ft)	RF3310	£57.39

CLEAR 3" IRON PROFILE POLYCARBONATE

ADVANTAGES OVER PVC:

- Vastly stronger than standard PVC sheets
- UV Coated, Blocking up to 99% of harmful UV
- Withstands higher temperatures up to 130°C (PVC: 60°C)
- Improved lifespan compared to PVC sheets
- Easier to install than standard PVC sheets
- Wider cover width
- Profile matched to our Galvanised sheets - see page 29

Manufactured using Polycarbonate Resin giving an extremely tough durable corrugated sheet. The ideal choice for residential, commercial, industrial and agricultural projects.

LENGTH	SUPER GRADE 1.0mm Thick

3.04M (10ft)	RG1010CL	£41.95

GALVANISED STEEL SHEETS

Galvanised steel sheets have been around for a very long time and are a very strong and secure roofing and cladding material. These are often used by emergency repair companies to temporarily secure properties before permanent repairs are made. The steel sheet is coated in zinc, which is more reactive to oxygen than the iron and causes a white oxidation coating to take place. Once all the zinc has been used up in this type of reaction then the iron in the steel will react and this is when the sheets will rust. These sheets are primarily used as a temporary covering, but to increase their lifespan they should be coated / painted to provide a barrier between the steel and the oxygen, to prevent rusting.

Pre-drill sheets before fixing. Holes for fixings must be drilled typically 4mm larger than the fixing diameter to allow for expansion. Drill sheets singularly with a HSS drill bit use **LIGHT** pressure. Support the sheet securely under each hole position when drilling. There should be at least 5 fixings across the width of each sheet which are to be fixed into the purlins and rafters.

CORRUGATED SHEETS

This traditional high top corrugated sheet can be used for a wide variety of projects from:

- Porches
- Carports
- Roof lights
- Greenhouses
- Cloches and cold frames
- Side cladding
- Sheds
- Walkways

With its glass clear clarity this sheeting can provide up to 3 times more natural light than vertical glazing, creating a bright environment below. This sheeting is strong but

light-weight making them easy to handle and install. The size of these sheets gives a larger cover area resulting in a faster installation time.

BIG 6 PROFILE GRP FIBRE GLASS CLASS 3 1.83kg/M²

Manufactured from Glass Reinforced Polyester resin (GRP) with unique light diffusing additives which scatter light passing through. These sheets provide effective daylight without hot spots or excessive glare. Can be used in single skin and double skin site assembled applications. Can also be used for insulating intermediate layers to provide improved insulation levels for compliance with current legislation. With excellent impact resistance and a highly durable UV resistant polyester film on the weather face which extends the durable working life of the sheet and helps to prevent the sheets from discolouring under normal conditions. Sheet life should exceed **30 years!**

Did You Know?

This type of sheeting is also available in over 900 different profiles, to match all current and most discontinued asbestos cement and metal roofing profiles. If you require a non standard profile, please contact us for a quote.

Available in various weights including 1.83kg/m², 2.44kg/m² & 3.06kg/m² to order

ONDUVILLA by Onduline

The **Onduvilla** range has been designed at Onduline's Italian design studio with a unique three tone colour shaded finish in Red and Green and also in standard black. Used to create a warm natural colour normally only associated with expensive and heavy clay roofing products. This attractive colour finish combined with the Mediterranean bold roll profile results in an exciting and exclusive roof covering that bestows an attractive aesthetic roof finish to any structure.

The practical design aspects of the **Onduvilla** tile strip range have not been overlooked with an innovative tile lapping system utilising a grooved lap joint to provide enhanced weathering performance. The tiles form an attractive, durable and light-weight roof covering that can either be laid on a roof decking or close boarding. The system is ideal for a wide variety of applications. A full installation PDF guide can be downloaded from www.cabp.co.uk

Onduline® Classic®

Onduline is an extremely tough, lightweight, corrugated roofing and wall cladding material, manufactured utilising a base board produced from recycled cellulose fibres which is saturated with bitumen under intense pressure and heat. Onduline sheets are finished with a colour pigment and resin impregnation process which “stains” the colour into the sheet to provide excellent colour retention properties and enhanced U.V. resistance. Onduline Classic sheets are ideal for a wide range of applications reflecting the materials unrivalled versatility for use on agricultural, industrial, DIY and environmental projects.

- ✓ Professional grade roofing

Follow these simple steps to design and construct a durable, long lasting roof.

1 Select roof slope: 15° degrees and over (Gradient: 1 in 4 or higher)

2 To support sheet: Fix to Purlins at 610mm (24") centres (max).

3 To fix sheet:

Sheet end lap: 170mm
Sheet side lap: 1 Corrugation
Nails per sheet: 20

Fig. 1 Fully supporting roof deck fixed @ 610mm centres

1 Select roof slope: 10° to 15° to degrees (Gradient: 1 in 4 to 1 in 6)

2 To support sheet: Fix to Purlins at 450mm (18") centres (max).

3 To fix sheet:

Sheet end lap: 200mm
Sheet side lap: 1 Corrugation
Nails per sheet: 25

Fig. 2

1 Select roof slope: 5° to 10° degrees (Gradient: 1 in 6 to 1 in 10)

2 To support sheet: Fix on decked or close boarding roof.

3 To fix sheet:

Sheet end lap: 300mm
Sheet side lap: 2 Corrugation
Nails per sheet: 20

Fig. 3 Fully supporting roof deck fixed @ 610mm centres.

Note: At the eaves allow a 50mm to 70mm sheet overhang. * On decked roofs position nail fixing lines at 610mm centres

DOMES WITHOUT UPSTAND or KERB

Q: What is a roof dome?

A: Roof domes are basically windows in flat roofs.

Q: Where do I use a roof dome?

A: On any flat or low pitched roofs that do not exceed 15 degrees

Q: What size do I need?

A: This depends on the size of the hole you have or wish to make. See tables for guide.

For hole sizes subtract 140mm from the Overall size quoted (example: a 600mm x 600mm dome would have internal sizes of 460mm x 460mm).

A range of glazing only units designed specifically for refurbishment projects where the glazing only needs to be replaced. These units are supplied with a fixing kit including weathertight washers and cover plugs. Manufactured from Marlon FSX Longlife polycarbonate, these glazing units are up to 200 times stronger than glass. The high resistance to breakage and adverse weather conditions means Mardome Reflex is very safe and reliable.

AVAILABLE COLOURS
BRONZE, OPAL & PRIVACY TEXTURED GLAZED DOMES

- Dome or pyramid option
- Can be mechanically fixed to existing kerbs
- Single, double and triple skin units available
- Available with standard 70mm or 100mm wide flange options to accommodate varying upstand sizes
- 20 Year Manufacturer's weather failure guarantee

Mardome Trade a standard specification dome. These units come complete with a host of features and benefits as standard to satisfy a range of projects and budgets.

Maximum daylight

- Side walls of the kerb are designed with a steep slope to allow a larger glazing unit to be fitted for maximum daylight area

Easy to install

- Delivered to site complete and ready to fit
- A large kerb foot radius makes for easier application of roof covering to the termination point without the need for timber fillets

Available Options:

- Electric Opening
- High Security
- Smoke Clearance
- Access Opening
- Other sizes also available

ADD ONS:

Vented Upgrade option for all Trade kerbs:

Simply pick the dome size you need then add this item to have your domes kerb include 2 Hit & Miss trickle vents.

Please Note: This option can only be added at time of order

150mm HIGH CAPACITY GUTTER & PIPE

The Kommercial range of guttering is 150mm wide and used in commercial applications or areas that require large volumes of water to be drained away. Our Kommercial gutter uses the 110mm soil pipe connections for the downpipe so is easily integrated into both new and existing installations that use standard 110mm soil and underground.

- 150mm half round profile
- 110mm pipe and fittings
- High flow capacity
- Due to greater flow capacity, ideal for large roof areas, Industrial and commercial buildings
- High quality finish

KOMMERCIAL GUTTER SYSTEMS

CAST IRON EFFECT GUTTER & PIPE

CAST IRON EFFECT GUTTERING

This unique Cast Iron effect guttering system has been designed to provide you with the authentic look and feel of traditional gutters, using long-lasting uPVC. The mottled effect finish helps to maintain the look and feel of period properties while allowing you to benefit from the low maintenance, fitter-friendly materials available today.

Whilst there is a continuing emphasis on building energy efficient homes, the external design and detailing of many new build developments remains traditional. Cast iron style guttering offers specifiers and property developers the ideal solution for a stylish traditional look giving homeowners a low maintenance long lasting system. The range also allows builders and renovators of period properties the option to update with modern materials without losing the charm and appeal of authentic features.

The Freeflow rainwater system is co-extruded with a white interior to reduce heat absorption and expansion of gutters and

features long-life advanced red compressible seals for ease of fitting and water-tight joints to ensure a leak-free performance.

This high quality product is also available in high capacity 116mm Full-Flo, Please contact us to request a quotation and lead times.

+ 10 YEAR GUARANTEE ON GUTTERING & PIPE

FASCIA & SOFFIT THE BASICS

CAP-OVER or FULL REPLACEMENT?

10mm Thick boards are for capping over existing timber boards

These must be in good condition and any mild damage or rot should be treated first with a very high grade wood preservative. Before capping, check the Roof Felt has a sufficient overhang to reach the top of the new UPVC board as well as the existing timber one. Over felt replacement sections should be fitted to cover the gap.

18mm Thick boards are for use on new builds and for full replacement on existing buildings

Timber sub-structures should first be examined for damage and rot, which should be treated with a high grade wood preservative or in severe cases cut out and new timber sections added in.

FASCIA & SOFFIT FIXINGS

FIXINGS Use colour-matching plastic headed pins and nails to fix boards into place.

CENTRES Fixing centers vary, but should never exceed 600mm for white boards, 300mm for black boards and 400mm for other colour and wood grain boards.

For more detailed information please visit the product page and click on the specifications tab on our website www.cabp.co.uk

FURTHER INFORMATION ON FASCIA & SOFFIT

Roof Ventilation should be considered, either by using vented soffit boards, Vent disks or over fascia vents. *See pages 45 and 47.*

Plastic headed pins and nails should be used to fix the boards in place fixing centers vary, but should not exceed 600mm for white boards-

we supply colour-matching heads *See page 47 for all colours.*

Gable end covers can be made by cutting a wide capping board to size. Use a 400mm or 600mm board, and fix into position. *See pages 44 and 45.*

CLADDING THE BASICS

PREPARING WALLS FOR CLADDING

Cladding boards should be fixed horizontally over timber battens,

CENTRES set at a maximum of 400mm apart upon the host wall. To protect the battens, a breathable membrane must be lightly tacked over the entire area before the cladding is fitted on top.

For more detailed information please visit the product page and click on the specifications tab on our website www.cabp.co.uk

FIXING CLADDING BOARDS

Begin at the bottom of the host wall by fixing starter trims with barb nails through the back of the trim, ensuring the cladding board is located inside the starter rim so the fixings will be hidden by the overlap of boards.

At the sides and corners, fix edge trims/ corner trims as required. Fix any external corners as you progress upwards, to allow for some movement when fitting the boards into place.

Allow a 5mm gap at each end of the board as they are designed to expand and contract with weather changes so it is important they are cut with some space allowance, which will be covered by the finishing trims.

When fitting the last board, it is likely its depth will need to be altered to fit into the available space, and depending on how much board is trimmed away it may be necessary to fix an additional batten behind to ensure it sits correctly. The last board must fit so it pushes up inside the trim's top edge and also sits correctly on the cladding board below.

BULLNOSE FASCIA

The **Bullnose/Round nose** fascia system is a traditional full curved style, 18mm thick fascia board that can also be used as an internal windowsill. Complete with corners, centre joints and end caps (for when using this product for an internal sill).

The Ultimate universal, high speed, high quality easy install dry verge. Left and right handed units are no longer required as Easy Verge U is truly universal. The unique design is quick and easy to install on any tile type and has exceptional holding qualities. A tight secure fit is easily achieved ensuring roof tiles are held firmly in place and not vulnerable to wind dislodgement.

The unique starter unit includes a verge-end closure and a blanking cap to ensure a secure, infestation free and aesthetically pleasing finish. For use in both new build and refurbishment application. UV stable in a choice of Brown, Grey or Terracotta.

WHITE GLOSS CLADDING BOARDS

uPVC Cladding is the best alternative to traditional wood cladding. This maintenance free product is perfect for today's busy life styles. No more rubbing down and painting. Freefoam's durable cladding products provide not only a decorative but also a protective facing on building exteriors, and act as an additional thermal insulation agent. We offer standard 'V' Groove and traditional Shiplap styles in white. The popular Fortex® textured cladding in a choice of styles, sizes and colours *can be seen on pages 50 onwards*. Woodgrain finished cladding is also available to special order. All cladding products come with related trims to ensure a neat and professional installation.

+ For fitting information please see page 53

SHIPLAP & 'V' GROVE CLADDING

FORTEX™ CLIC 150mm & 180mm

Fortex Clic is an innovative PVC cladding board suitable for a wide variety of home improvement projects and ideal for many external situations. Featuring a clever tongue and groove style joining mechanism, a subtle embossed textured surface and a range of attractive natural colours.

150mm Clic cover width board as a tighter joint along the board overlap giving a more flushed appearance.

180mm Clic cover width board as an open V joint along the board overlap giving a more pronounced joint.

The new ingenious Clic and Fit joining mechanism, is attached on the long edge of cladding making fitting quick and easy, simply push together and click – no need for any joint covers. Comes with an accompanying range of adaptable trims, allowing you to fit cladding boards horizontally or vertically. Ultra low maintenance PVC cladding offers the ultimate fit and forget product.

No need for painting or re touching, just the occasional wipe down with a damp cloth or quick jet wash. Supplied in manageable 3.2 metre boards Fortex Clic is designed to be easy to handle and transport. Ideal for any home improvement or building project.

HORIZONTAL

VERTICAL

3.2M Lengths Pack of 6 Boards	PART	PRICE
150mm Clic Anthracite Grey Only	LSC315AG	£99.99
180mm Clic	LSC318*	£112.47

Typical Installation Sequence

1. Fix a suitable breather membrane to surface.
2. Fix 25mm x 50mm vertical battens at 400mm spacing. Start 20mm from the ground and allow 10mm gap at the top.
3. Fix starter trim along the base and top of the area to be clad.
4. Fix first part of 2 part Edge, Corner and Reveal trims as needed. Do not cut second parts of trims yet.
5. Fit first cladding plank into starter trims and screw top of cladding to batten.
6. Interlock next cladding plank to the first plank and screw into batten. Repeat until area is clad.
7. Finally cut the second part of 2 part trim to size and clip into place.

FORTEX 170mm CLADDING

PROFESSIONAL RANGE 333mm Cover Width

Fortex external cladding is a maintenance free cladding system that also brings the benefit of helping to insulate your building (when fitted with standard insulation you can achieve an A+ (BRE) Rating). Fortex has been specially formulated to withstand the test of time using lead free materials and rigorously tested to provide a minimum of a 10 year colour guarantee. Fortex cladding is also manufactured in a sustainable manner and comes with significant environmental credentials.

Each 5M board provides 1.66Sq/M of coverage

Quick Installation: All cladding boards are fitted using a tongue and groove joint on their height which also hides the fixings making for a fast and attractive installation.

HIGHLY VERSATILE SOLID CLEAR POLYCARBONATE

IDEAL FOR:
 > Greenhouses.
 > Secondary Glazing.
 > Security Glazing.

+ Solid Polycarbonate is 200 times stronger than glass and can be used in many everyday applications. Common uses include re-glazing sheds, greenhouse glazing, secondary glazing, plus 1000's of other uses around home and work.

CLEAR SOLID POLYCARB

UV Protected both sides

This highly versatile product is totally glass clear, with an impact resistance 200 times greater than that of glass. All of our sheets have a UV coating on at least one side to stop UV deterioration, ensuring a longer life span. Always check when installing to eliminate the chance of installing the wrong way around. These sheets are extremely easy to cut and drill making them an ideal DIY friendly glazing alternative.

SECONDARY GLAZING STRIP

PART	PRICE
FT24WH	£6.02

2.44M (8ft) WHITE

Easy to install, 2.4M long strips will accept 2mm or 3mm panels. The strip is in 2 sections, the inner section is pushed around the edge of the sheeting and then screwed into the frame, then the top screw cover is pushed into place.

SECONDARY MAGNET GLAZING

PART	PRICE
MG5	£26.39

5M (16' 4") Per Roll

Two self-adhesive strips, one part is magnetised, the other steel. Applied by sticking one part to the framework and the other to the sheeting. Once installed it will be magnetically held into position making it easy to remove for cleaning or access.

SOLID POLYCARBONATE

IDEAL FOR: Bathrooms, Food preparation areas, Clean Rooms & Easy to clean areas

WHITE PVC PANELS

Chemically resistant with a **Class 1 Fire Rating**. These 2440mm x 1220mm (8' x 4') panels are impervious to water and when installed correctly are compliant with statutory regulations for wall coverings in areas of food preparation and packaging. If the area you wish to apply the sheets to isn't smooth and flat then the 3mm should be used for it's increased rigidity.

MULTI-TRIM WHITE

2.44M (8ft)

Designed for use with the 2-3mm white PVC sheets. The clever design has a flexible co-extrusion along the centre to accommodate any angle from 90°-270°

As an H Joint

As an internal corner

As an external corner

SUSPENDED CEILINGS

Armstrong suspended ceilings are designed for maximum effect with modest cost and fast installation times. The professional steel framing interlocks for rigidity and is fully Fire Rated for areas with public access. An easy to assemble system that gives you a neat and clean finish to any ceiling.

ITEM NO	DESCRIPTION	PART	PRICE
1	Main "T" 3.6M (11' 9")	CFT36	£8.68
2	Spacer "T" 1.2M (3' 11¼")	CFT12	£2.90
3	Spacer "T" 0.6M (1' 11 ½")	CFT06	£1.44
4	Suspension Wire 10M	CW10	£2.33
4	Suspension Wire 100M	CW100	£16.19
5	Wall Angle 3M (9' 10")	CWF3	£5.62

The white-faced, galvanised, steel interlocking frame is fast and easy to install. An angle section is fitted around the walls, then the main 'T' sections rest on these and reach across the room. The spacer 'T's are then fitted to create the desired tile space.

CEILING TILES Prismatic, Fissured & Sandgrain

FISSURED Tiles

The non-directional FINE FISSURED surface is easy to install and effective for sound absorption. Ideal for use in circulation areas, meeting rooms, cinemas etc. Fissured face tiles meet the EEA Euro class A2-S1 Fire Rating standard. With excellent sound and heat insulation properties, they have a pale surface that reflects 75% of ambient light and are easy to cut and fit.

DUNE SANDGRAIN Tiles

The non-directional Dune tile has a fine sand grain finish with a lipped edge so the tile sits below the framework rather than on it, to create a 3 dimensional ceiling. Ideal for use in schools and offices. Meeting the EEA Euro class A2-S1 Fire Rating standard, it has high sound and heat insulation properties with the further advantages of being highly resistant to humidity and water with a surface that reflects 85% of ambient light.

PRISMATIC Panels

Prismatic panels are translucent allowing light to pass through them into the space below, two versions are available in both the Oblong and Square sizes. Clear panels have a diamond pattern on the lower surface and transmit the most light, whilst the Opal panels diffuse the light to reduce shadows.

All our ceiling tiles are designed to fit standard ceiling systems that accept 595mm x 595mm or 595mm x 1195 tiles.

For our online guides and parts list calculator please see our website www.cabp.co.uk

HAVING TROUBLE?

We can help calculate the materials required

Mitre Box

Special large design for cutting all the range or cornices and skirtings up to 165mm wide. Cutting profiles is made easy using this large format mitre box.

Up To 165mm

PART	PRICE
IMB7	£11.00

GRIP ALL— Solvent Free

WHITE Ultra-strong gap filling grab adhesive with Soudal's unique Reinforced Bonding Technology. Compatible with most building materials, porous and non-porous.

Solvent free - . High initial grab - 300kg/m2.
C3 Cartridge

PART	PRICE
SGASF	£3.45

FIXING KNOW HOW:

- Ensure surfaces are clean, dry and free from dust.
- Mitre the moulding the same way as if it were wood for a perfect joint.
- Fix the profile in place using a solvent free gunnable adhesive.
- If require a caulking maybe used to fill joints
- No need to paint but if you want to then you can just paint straight away

Detailing the natural beauty of wood planks, realistic timber variations, grain effect and surface texture, combined with reproduced tones gives each plank an authentic appearance.

Camaro Loc is the ideal solution for transforming your home with the minimum of disruption, this range has an interlocking grooves to allow quick & easy installation. With a range of colours available spanning both wood and stone designs in hand selected shades to provide a beautiful, practical design for any interior space.

Some of key features:

A polyurethane coating to reduce maintenance, A BRE Global Generic A+ Rating for major areas, Made with up to 40% recycled content, An R10 slip rating. A 10 Year residential & commercial warranty.

ISLA CONCRETE

MAISON CONCRETE

- Made from durable extruded polystyrene and paintable.
- All the benefits of wood such as it cuts and joins just like wood.
- None of the disadvantages of wood such as splitting, warping or woodworm.
- Light weight, easy to handle with no imperfections like knots.
- High quality and consistent finish on every length due to foil finish.
- Moisture resistant and can be used in areas of high humidity.
- Competitively priced when compared to the equivalent quality and finish of natural wooden products.

JG Speedfit is a push-fit system suitable for the plumbing of domestic hot and cold water services and central heating applications, including pressurised and combi systems.

The System is approved by the Water Regulations Advisory Scheme. Speedfit 'PEM' fittings and PEX and Polybutylene Barrier Pipe are Kitemarked to BS7291 Parts 1, 2 and 3 Class 5 Licence No KM39767.

Performance specifications are well within those required for most central heating and water supply systems including:

- **Mains fed and indirect cold water systems**
- **Vented and unvented hot water systems**
- **Vented central heating systems**
- **Sealed central heating systems provided temperatures and pressures comply with BS7291 Parts 1, 2 and 3 Class 5**
- **Underfloor heating**

Extensive tests have shown that Speedfit products will withstand temperatures and pressures well in excess of normal working conditions.

Speedfit should be installed to conform with good plumbing practice.

15 & 22mm Copper Pipe, Fittings & Accessories

Manufactured to BS EN 1254-1:1998 Copper end feed and solder ring fittings (also known by the trademarked name Yorkshire fittings) are available from stock in sizes 15mm & 22mm. These fittings are suitable for use in solder joints with copper tube to manufactured to EN1057. Our comprehensive range of high quality copper end feed and solder ring fittings are for use in hot and cold water plumbing and heating systems. All our Solder Ring Fittings are **LEAD FREE** pre-soldered capillary connectors for joining copper pipes. These are ideal when fitting in confined spaces and where single handed fitting is required.

16 & 22mm Buteline Pipe & Fittings

Based on hydraulic engineering principles and backed by superior manufacturing standards worldwide, Buteline's innovative products provide dependable plumbing solutions that are time-proven.

The Buteline Plumbing System is designed for hot and cold water reticulation using Polybutene-1 (PB-1) pipe and thermoplastic polymer fittings, or for cold water only using Polyethylene (PE) pipe and polymer fittings, utilising Buteline's proven and efficient clamping technique.

The Buteline Plumbing System has a proven performance record for over 35 years, and Buteline only selects materials which are specifically designed for their applications. Buteline always represents quality.

Buteline fittings are integrally strong and durable, the polymer fittings are moulded from a high tensile premium grade custom thermoplastic and pre-fitted with annealed aluminium sleeves. Brass fittings are made from de-zincification resistant (DZR) material. These fittings, once jointed with Buteline Polybutene-1 pipe, form a unique and technically superior joint, guaranteed for 25 years. Users will find the total concept much quicker and more economical than other available systems.

20mm, 25mm & 32mm MDPE Fittings

Blue MDPE plastic pipe is designed for below ground

use, however it may be used above ground in situations where it is not exposed to light and is protected against: undue warming, freezing and potential contamination from the environment.

Due to the way modern MDPE is made they have a life span of well past 50 years and has been used for all drinking water installations on new builds for many years

The **Kartell** K-Rad collection of radiators will enhance any home with space saving classic elegance and efficiency. Comprising over 210 sizes, they are manufactured using the latest state-of-the-art technology ensuring maximum efficiency.

Internally welded with a final coating of white enamel (RAL9016) each radiator is degreased and zinc phosphated before being coated with water-based cathophoratic paint. The final coat is applied using an epoxy polyester electrostatic powder coating system that is baked to a hard finish. You also have the protection of our 'Kartell No Quibble Guarantee' against faulty manufacture which lasts for 10 years. All radiators come complete with factory fitted top grille and side panels.

CONNECTIONS

Each K-RAD Kompact radiator has 4 x 3/4" connections as standard. 3/4" valve adaptors are available, which provides a 3/4" inch connector option to the valve without reducing performance. **INSTALLATION** Everything required for installation can be found within the robust packaging.

APPLICATIONS K-RAD radiators are suitable for two pipe installations. For single pipe applications, it is advisable to use diversion tees in the pipework, as this will assist in obtaining design performance from the radiators. Brackets are of a strong design, with open top and deep slots, which facilitates easy and secure installation. Plastic inserts seat the radiator precisely on the bracket minimizing expansion and contraction noise. The neat nickel-plated plug and vent provide a watertight joint, whilst complementing the superior finish.

INSTALLATION A minimum of 100mm from the floor bottom of the radiator is required. There are two options for the valve centre to wall dimension which is dependant on how the wall plate is fitted. Type 11—40mm or 55mm, Type 21—65mm or 80mm, Type 22—82.5mm or 97.5mm

BLACK & WHITE SOLVENT WASTE 32mm 40mm & 50mm

Kalsi solvent weld products are ideal for both the trade and diy applications. Used

throughout the home and industry for removing waste water from sinks, baths and other applications it is the popular chose due to being extremely quick to install and use with minimal wait times of just a few minutes. 32mm 40mm & 50mm Solvent waste pipe and fittings come in both **BLACK & WHITE**.

This easy to assemble product range that requires only the most basic of tools gives you a bond in seconds. The end result is a perfect seal and professional finish to every job.

Solvent Cement waste systems give that solid connection avoiding the problem of moving pipes and joints that can come apart resulting in unwanted floods.

All our waste products are manufactured to the following British Standards

BS 5255:1989
BS 4514:1983
BS 3943:1988
BS EN 1451:2000

110mm

Soil pipe and fittings using Forsheda Seals to ensure ease of installation and a long life all made to British Standards

110mm Soil Pipe and Fittings are compatible with all standard 110mm soil and underground systems in the UK. Kalsi 110mm Soil waste system compliments our 110mm underground system and our 32mm, 40mm and 50mm solvent weld waste system. The complete system consists of extruded pipe sections and injection moulded fittings and provides an efficient way to convey sanitary waste from all types of buildings. The components in these systems enable the construction of Soil and Waste installations complying with the requirements of BS EN 12056-2:2000, and

with The Building Regulations 2002. Building Standards (Scotland) Regulations 1990. Building Regulations (Northern Ireland) 1990.

110mm UNDERGROUND

Combo Canopy

Easy-fit Door Canopies are ideal to cover doorways, balconies, walkways and waiting areas, to give just a few suggestions. Our canopies are sold as kits and are quick to install and only require a small amount of assembly.

The support brackets on each side are made from weather-proof engineering-grade plastic and each one requires only two wall fixings (supplied in kit). These canopies can be installed individually, or back-to-back and side-to-side to give cover over a larger area.

We have a range of sizes available, with grey, off white or black brackets, and a choice of bronze or clear multiwall polycarbonate, or Solid Clear Polycarbonate glazing.

C&A Building Products

Tel 01634 374444 www.cabp.co.uk

We were established in 1968 by our founding couple, Charles, and Audrey. Back then, plastics were still a relatively new product that were being introduced into the construction industry. But our founders had a vision- that plastics were going to be a crucial building block for the future of construction. With their background in carpentry, it only made sense that these skills should be used in conjunction with newly emerging products. As such, the focus was on canopies and carports. These canopies were made to measure and sold as either self-assembly kit or with a complete install service; this began to form the company that we are today. We grew from canopies and carports, and evolved into selling bathroom products, and so much more.

Because of their success, we have become one the largest independent distributors of PVC corrugated & Polycarbonate multi-wall sheeting in the UK to date, and have continued to stay. Because of this, we are often consulted by manufacturers about the feasibility of products in the UK before they launch full production.

Staying at the front is never easy, and sometimes, people tend to miss what is happening around them- we also fell victim to this. We did not see the emergence of the UPVC fascia and soffit markets in the 1990's. As a result, we were stuck playing 'catch up' for a while. However, we caught up incredibly quickly. To aid in ensuring that we do not miss any opportunities in the future, we always strongly encourage any sort of feedback from our customers, or suggestions about what you would like to see; or what you would like us to improve. Part of our continuous growth has resulted in us designing our own range of roofing bars. Over the years, we have developed products with multiple different aspects. The Avon, Vale, Eden & Peak etc glazing bars are prime examples. These products have been created entirely by us, with you in mind. We always try to offer products that will suit everyone, and this has resulted in a range of products that can all achieve the same goal, but not without different functions and unique aspects. We certainly try our best to please everyone possible.

Today, we are still quite like the founding beginnings. We are still a family firm with a strong belief that we can continuously improve and help people. We pride ourselves on keeping at the leading edge, as well as maintaining consistent communication with leading industry experts, as well as economic advisors. We are always looking at new ways to improve our products, service, and help you gain more value for your money. We use our own range of custom-fitted vehicles to offer a delivery service throughout the UK. This allows us flexibility with regards to deliveries, with our very own drivers able to offer a personalised service. Recently, we have also redesigned our website to give a more pleasant and interactive customer experience. We have included the ability to access your order history, thus allowing you to never experience any sort of hassle when you need to order something again. Our website boasts a forever evolving video collection- designed to help customers understand our products, with a personal touch. However, we also have a number of highly experienced staff at the other end of the phone; always available to discuss your wants and needs. These are just some of the improvements that are visible to you but rest assured- we work equally as hard on the behind the scenes to always ensure we can grow to help you even more. We intend to bring out a multitude of new, exciting developments and special offers in the future. To hear about them first, you should ensure you keep your records up to date with us. Please ensure to consistently update any address, email, or phone numbers so that we can always provide our best service!

HOW TO ORDER

> ONLINE – Go to www.cabp.co.uk

Our Online Shop is open all day, everyday, 365 days of the year. You will find all of our products listed online, plus any special offers we currently have running. With our fast and secure servers you can be confident that all of your information is securely encrypted. Our automated shopping cart calculates your bulk order discounts for you, so getting quotes and placing orders is made fast and easy.

> BY PHONE – Call - 01634 374444 - 0207 474 0474

Our sales team are on hand to provide advice on materials and to put together quotes and orders for you based on your requirements. With payment by card, orders will be processed immediately with a detailed Order Acknowledgement sent immediately for confirmation. For cheque payment, your order will be prepared and processed as soon as the cheque has cleared. **Our sales team are available 7:30am – 4:00pm Mon – Fri**

> BY POST -- C & A Building Plastics, Courteney Road Gillingham Kent ME8 0EZ or Bidder Street, London E16 4ST

Use the Order Form at the back of this catalogue should you wish to order by post. If ordering on your own stationery, please list your requirements in the following order; PRODUCT/ PART No/ UNIT PRICE /QUANTITY/ TOTAL COST. Total the cost of your materials, subtract any bulk order discount applicable, add the delivery cost, and then add VAT. Send your order with payment in full by cheque, made out to *C&A Supplies Ltd.*

> OVER THE SALES COUNTER— See website for branch opening times www.cabp.co.uk

Cash and card payments are accepted, but we do not accept cheques for trade counter orders. **PLEASE NOTE:** Payment over the phone for collection and cash on delivery facilities are NOT available. Ledger accounts will be considered for regular customers.

DISCOUNTS

If you are working on any form of building project then you want to save as much money as you can. At **C&A** we recognise that money does not grow on trees and to keep costs as low as possible we have a simple discount structure based on your order value.

Over £1000.00 10% off
example :- £1000 nett will get £100 discount from your order = £900 +vat

TRANSPORT & STORAGE

All plastic building materials should be kept flat during transport and storage. If stacked, materials must then be covered with a light-proof sheet to prevent direct sunlight overheating the interior of the stack, with all products flat and level without excessive weight on the bottom layers.

TERMS & CONDITIONS

In these terms and conditions - "C & A Building Plastics" means, C & A Supplies Ltd and any other connected organisation that supplies the goods ordered by you and any successor to its business; "We and Us" means C & A Supplies Ltd either alone or together with you, as the context requires; "Working day" means every day of the year except weekends, and English statutory and public holidays; "You" means the person ordering goods subject to these terms and conditions.

C & A Supplies Ltd, Courteney Road, Gillingham, Kent ME8 0EZ. Registered in England no 3895992 VAT Registration no. GB 248096048 To contact us please ring 01634 374444 or by email to cs@cabp.co.uk

Privacy Policy Statement - You can view or update the information held by us on request by emailing gdp@cabp.co.uk, this includes asking to be removed from future catalogue and email marketing and the deleting of personal data.

Customer order fulfilment data - In the interest of order fulfilment the company processes your data and information in accordance with the GDPR legislation under the lawful basis of 'contract'. GDPR Article 6(1)(b) "processing is necessary for the performance of a contract to which the data subject is party or in order to take steps at the request of the data subject prior to entering into a contract". This can involve the automated processing of the data to fulfil these interests.

Customer marketing data - In the interests of marketing the company processes your data and information in accordance with the GDPR legislation under the lawful basis of 'legitimate interest' as you have shown interest and / or had contact with the company and / or one of its marketing efforts. Examples include but are not exhaustive; meeting at exhibition or interaction with the company including its website.

Data to third parties - Your data is not sold to other parties, and is only processed in order to fulfil the 'contract' or 'legitimate interest'. Some of your details may be shared with a third party, which will be used for the purpose of fulfilling the 'contract' or 'legitimate interest' as a reasonable step, and these third parties themselves are required to be compliant with GDPR legislation. This is limited to the information we believe is relevant to fulfilling the targets within the lawful basis, with the minimum of hindrance in variable environments, without the privilege of hindsight to individual circumstances without forewarning.

GDPR with regards to other legal data storage requirements - Personal data that has been requested for any alteration will be complied with to the extent that is permissible given other legislative compliances that we must also adhere to. These include but are not exclusive to the prevention or investigation of a suspected / potential crime and HMRC requirements.

Your Order—You will have an opportunity to check and correct any errors on your order up until the point at which you submit and pay for your order. All orders made by you through cabp.co.uk are subject to acceptance by us. We may choose not to accept your order for any

reason and will not be liable to you or to anyone else in those circumstances. After submitting an order to us we will send you an order acknowledgement email with your order number and details of the goods that you have ordered. Please note this email is an acknowledgement and is not an acceptance of your order. Stock availability information is not available on cabp.co.uk. If you order goods which are not available from stock, we will contact you by email or by telephone to discuss how you wish to proceed. You will have the option to wait until the goods are available from stock or cancel your order in accordance with our returns policy. Unless we have notified you that we do not accept your order or you have cancelled it in accordance with our returns policy, we accept your order 7 days after the date of order or when the goods are delivered, whichever is earlier.

Liability – We shall not be liable to you where performance of any of our obligations to you is prevented, frustrated or impeded by reason of acts of God, war and other hostilities, civil commotion, strikes, accident, lock outs, trade disputes, acts or restraints of Government, imposition or restrictions of imports or exports or any other cause not within the reasonable control of C & A Supplies Ltd. If any part of these Terms and Conditions is found to be unenforceable as a matter of law, all other parts of these Terms and Conditions shall not be affected and shall remain in force. All sizes quoted are approximate. Where C & A Supplies Ltd agrees to provide a specifically designed plan, the Customer agrees to check the accuracy and suitability of the plan. C & A Supplies Ltd cannot advise on planning permission or building regulation issues. Asbestos may be found in some older properties. If you have any concerns about the presence of asbestos you should seek advice from a licensed asbestos company. The Customer is responsible for obtaining all necessary planning permission and local authority consents and permissions for any work to be carried out. Any plan drawn by C & A Supplies Ltd is, and remains, its property and may not be reproduced in whole or in part without its previous written consent. To the extent permitted by law, C & A Supplies Ltd accepts no liability for any loss, damage or injury arising as a consequence of the advice provided.

Law - These Terms and Conditions and any contract between us shall be governed by and construed in accordance with English law and the English Courts shall have jurisdiction over any disputes.

Prices – The prices of the product are clearly shown with and without VAT online and without VAT in our catalogue. Prices do not include delivery charges. On occasion, the prices payable in respect of goods advertised on cabp.co.uk may differ from those prices payable at the same time in C & A Supplies Ltd branches. We are under no obligation to honour any cabp.co.uk prices in the event that they differ from those in branch. Similarly, we are under no obligation to honour in-branch prices in the event that they differ from those on cabp.co.uk. Prices that are reduced for sales and promotions are only valid for the specified period and that branch offering those items. We reserve the right to adjust prices, offers, goods and specifications of goods on

cabp.co.uk at our discretion at any time before (but not after) we accept your order. Although we endeavour to ensure that all pricing information on cabp.co.uk is accurate, occasionally an error may occur and goods may be mispriced. If we discover a pricing error we will, at our discretion, either contact you or ask you whether you wish to continue with the order at the correct price or notify you that we have cancelled your order. We will not be obliged to supply goods at the incorrect price.

Force Majeure—When market forces effect our cost prices and we can not absorb these then prices charged may vary from our catalogue

Discounts – May be withdrawn at any time and are subject to change and are given at C & A Supplies Ltd.'s discretion.

Product availability - C&A reserves the right to alter published prices and specifications and withdraw products and services without notice. We will not be held responsible for any costs incurred by a customer when a price, specification, product or service is withdrawn or changed. Where a customer has placed an order based on an obsolete price, specification or service, C&A will inform the customer and wait for further instruction. If payment has already been made for such goods or service, the customer shall be entitled to a full refund for all items that are not then required.

Property – Property of the goods shall not pass to the customer until payment is made in full. If the customer defaults in punctual payment of any sum due we shall be entitled to repossess any goods that remain our property.

Payment - The total cost of your order is the price of the goods and delivery charges as set out in our delivery information. Payment can be made by most major credit or debit cards, PayPal, bank transfer or cash. You must confirm that the credit/debit card being used is yours, all credit/debit card holders are subject to validation checks and authorisation by the card issuer. If the issuer of your card refuses to authorise payment we will not accept your order and we will not be liable for any delay or non-delivery and we are not obliged to inform you of the reason for the refusal. We are not responsible for your card issuer or bank charging you as a result of our processing of your credit/ debit card payment in accordance with your order. PayPal payment orders will only be accepted for orders that are for delivery and are subject to PayPal's confirmation of funds. This can in some circumstances take several days. Bank transfers are manually checked and verified, and although you can have instant transfers this does not mean that we are able to instantly check and validate the payment. This process can take a few minutes or a couple of days and no agent should be sent to collect an order until after you receive your order acknowledgement. Cash will be checked to verify its legitimacy and legality, cash will not be accepted if it is not legal tender or if we have any suspicion as to its legitimacy.

TERMS & CONDITIONS

CONTINUED FROM PAGE 90

Colour – Due to batch production C&A cannot guarantee a colour match between materials ordered and supplied on separate orders or products of different dimensions. Colours shown online or in our catalogue are a representation and may not reflect a true likeness.

Fitness of goods - No goods are sold as fit for any particular purpose. All hints, tips and work practice advice published by C&A in its catalogue, web site and advertising are given without detailed knowledge of the customer's application and cannot be relied upon. Customers must satisfy themselves that materials ordered meet the building regulations and codes relevant to the purpose for the intended use.

Faulty Products – If the product you purchase is faulty we may offer a repair, exchange or refund as appropriate in accordance with your consumer rights. Please call us on 01634 374444 or emailing cs@cabp.co.uk

Delivery - The products that C & A deliver are often large in dimension, therefore optimised routing of specialist vehicles is often undertaken to perform the deliveries. This often means that accurate dates are not available at the time of placing the order and an estimated timeframe is given. We make 98% of all deliveries within 10 days however it is suggested that you allow up to 30 days if your project is time sensitive. For this reason, delivery time is not considered of essence of the contract unless specifically set out in writing with special delivery charges and acceptance. C & A will do all that it reasonably can to meet the date given for delivery. In the case of unforeseen circumstances beyond the reasonable control of C & A, we cannot be held responsible. In such circumstances C & A will contact the Customer and agree an alternative date. The Customer will also do all that he/she reasonably can to enable the delivery to take place on the given date. In the case of unforeseen circumstances beyond the reasonable control of the Customer they must contact C & A and agree an alternative date. The delivery service is for delivery to the sites kerb side only, C & A are not responsible for placement into gardens, and building sites etc. and the customer should ensure that suitable labour is provided for this at the time of delivery. As soon as C & A has delivered the goods, the Customer will be responsible for their safekeeping and C & A will not be responsible for any damage or fault arising from incorrect storage. If the Customer delays a delivery, C & A's responsibility for everything other than damage due to its negligence will end on the date C & A agreed to deliver the order as set out in the contract. Ownership of the goods shall remain with C & A and shall not pass to the Customer until the agreed price for them, together with all other sums due from the Customer to C & A, have been paid in full. Any estimated time scales advised are working days from the day following the order date.

Damaged or missing items collected - It is the customer's responsibility when collecting goods from our premises to check they

have all the items ordered and that they are in good condition. C&A cannot accept responsibility for damage or shortages once collected goods have left our premises. Where a customer has arranged for a third party to collect goods on their behalf, the same conditions apply as it is your responsibility that your agent undertakes this. Claims for damage will not be accepted once the items have been loaded on to the customers or collecting agents vehicle

Damaged items delivered - Deliveries by our own transport must be checked with our driver at the time of delivery and any damage must be clearly noted on the paperwork before you sign. Deliveries by carrier that have arrived damaged should not be accepted unless the carrier accepts the damage and can provide written confirmation to that effect. Signing "unchecked" or similar is agreeing to accept the delivery damaged or otherwise. C&A will not be liable for any costs or compensation for damaged items when notified at a later date. We may ask you to send photos to better understand which items are damaged.

Missing Items Delivered - You must contact us within 72 hours with details of the suspect missing items. Notification after this time will result in claims being rejected. The customer is responsible for storage of all products delivered, if you request items to be left without a signature then you accept full responsibility for missing or damaged items.

Returns Policy - C & A Building Plastics are proud of the products we supply and want our customers to be happy with the products they purchase. To this end we offer a 14 calendar day returns period where we will accept return of our standard products that are in resalable condition, even if it's just because you would prefer a different colour, you can return to either branch. Due to ever increasing costs a £10 admin + 20% restocking fee will be applied to all returns, for items brought on the trade counter or after 14days for delivered items. You will be informed of these charges before your return is accepted. The 14 day returns excludes non-standard products specially ordered or have been customised to your requirements; for examples domes are manufactured to your requirements from specific specification criteria and so are custom made. The entire product that you purchased must be returned, we cannot accept a component of the product on its own. Simply contact us within 14 days and inform us in writing that you wish to return the product and then return the item with a copy of your acknowledgment / invoice that includes the products being returned within 30 days from your request to return. Upon return we will inspect the items to ensure they are in acceptable condition. Those that are damaged, dirty or otherwise deemed to be in an unsaleable condition will not be accepted for refund. If the returned items are part of an order with multiple items on it and not all items are returned then the delivery charge will not be refunded as it will be associated with the items not returned. If the entire order is returned then the standard delivery charge that would be applicable to the items will be refunded. The additional value for premium service will not be refunded for example express services. It is your responsibility to

return the items to us, you are responsible for their safe transit and the costs incurred in their transportation. If you are returning the product to a branch we must be notified which branch this is when you notify us in writing. If you are unable to return the items yourself, we can arrange for the return transportation. Due to the various different products we supply and their varying degrees of difficulty in transportation we are unable to give the exact costs for the products return, however we will estimate these costs at the time of applying for the return of the items. Our vehicles are delivery vehicles and to divert a vehicle to collect a return will not be less than £100 but could be more depending on location and materials. Delivery charges do not reflect the true economic costs involved in their dispatch, to this extent, the cost of return deliveries are therefore not subsidised and can be higher than those charged for dispatch. Goods can only be collected from the site at which we made delivery. We will attempt to make the collection within 30 days from the agreement. The driver is not responsible for checking the condition of the materials. Checking the returned materials takes place when received back at the depot and their condition is assessed. If your order qualified for a bulk discount then it is deemed that all the items within this order were discounted proportionally to achieve this discount, your returned item will be refunded at the value that you paid for them. For example an order of £1000 with a bulk discount of 10% has a product returned of the value of £100 list price, proportionally this item was discounted by £10 to achieve the bulk discount and so the price paid for the item was in fact £90. Refunds are made in the same format as the payment was made unless otherwise specifically agreed and will be made within 14 days of the return being checked and accepted.

OUR DELIVERY SERVICE

The sheer size of many of the products dictates that special care with handling and transportation is required. For these, C & A deliver most products directly to the customer using our custom-built vehicles operated by our own employees. The route planning for these vehicles is dependent on the areas from which new orders are received and is calculated on a daily basis, but we aim to visit all areas of the UK at least once every 10 working days. Please note that whilst we try to maintain a 10 day rota, there are many factors beyond our control that prevent us offering any guarantee of any delivery dates

(Floods, Snow, Road Closures etc) We will always try our best to make every delivery but should we ever have to abort then we will always contact you. When your order has been dispatched we will send an email and a text message. Please note this message is only to advise you that your order is on its way. We always ring the customers the day before delivery, this is normally the driver and they will provide you with an expected delivery time scale. If there are any unforeseen delays whilst on route we will contact you with an update.

SMALL ITEMS—Orders for small items will normally be sent by carrier or post as this maybe the fastest method of delivery, customers will need to sign for these deliveries. Customers with very specific build dates are advised to order at least 28 days in advance and should be prepared to store the materials on site. Urgent orders can sometimes be sent by carrier on a next day delivery service but you will need to contact us directly to ascertain the feasibility of the products you require and the cost of doing so.

DIRECT TO CUSTOMER— Some products are delivered “Direct-To-Customer” as they are shipped from the manufacturer. These deliveries are normally an AM or PM delivery time and date and we will always advise the customer of this as soon as we have the information. This is normally the day before the delivery.

SPECIAL / URGENT GOODS— It may be possible to load special or urgent deliveries onto a C & A vehicle that is scheduled to cover a different area or arrange for another driver to make the special delivery. Customers wishing to enquire about Special / Urgent delivery should contact us for availability and cost, but should bear in mind that vehicle running costs are £275 a day and our delivery schedules deal with a volume of customers all over the UK, therefore we cannot delay a vehicle that already has a full load of orders and which is ready to depart. For both C&A transportation and carrier, remote areas of the UK may incur a higher delivery cost than those listed, in which case the customer will be advised of the delivery cost before order acceptance.
