MULTIWALL POLYCARBONATE INFORMATION & KNOW-HOW

This information is a broad overview for a working knowledge on Multiwall sheeting. Each sheet will be slightly different due to its structure and resin composition and individual data sheets should be consulted if any doubt of the product's suitability for use.

Multiwall polycarbonate sheeting is a versatile, easy to cut, lightweight, high-impact resistant, insulating and fire resistant product (most have an AA Fire Rating to BSI Standard 476 or its equivalent in the country of origin). Ideal for roofing or vertical wall cladding applications, and used in many other applications such as set design.

SHEET SPECIFICATIONS

3.1

"U" VALUE

INSULATION—The U Value is the measure of heat transfer through the sheet. The lower the number, the less heat is transferred—better insulation and lower fuel bills!

UV

PROTECTION

UV PROTECTION —The outer face of the sheet has a special coating to prevent degradation by natural UV sunlight. UV stabilised increases a product's life span.

1.5

KG/sqM

WEIGHT—Shown per 1M². As the weight of the sheet increases, generally the level of rigidity will also increase.

**MIN
SUNLIGHT
MIN
VISION**

SUNLIGHT AND VISION — A summary of the sheet's amount of sunlight penetration and the amount of vision it allows through the sheet.

**HEAT
SHIELD
PROTECTION**

HEAT SHIELDING — Sheets with this symbol have a special coating designed to reduce heat, providing a cooler space below the sheet.

LIGHT TRANSMISSION —Manufacturer's measure the light that passes through their sheets. However, they use different tests in different laboratories and so real world comparison between them is difficult. This symbol is our own indicator as to the shading we feel they provide. Official figures can be obtained from the individual product data sheets.

Sheet Expansion

EXAMPLE. 3M x 980mm SHEET

> Polycarbonate roof sheets must be fitted with a gap that allows them to expand with temperature changes.

> **AT THE TOP**—Allow a 3mm gap for each metre of the sheets length (this will be covered by a wall flashing).

> **AT THE SIDES**—Allow a 3mm gap between the sheet edge and the centre ribs of the Glazing Bar on both sides (An average bar centre spacing is 20mm wider than the sheet itself. A 980mm wide sheet allows bars to be set at 1M centres).

VISION

This **Clear** sheet offers no real shade and reduces light by a small amount and has subtle rib lines across the width of the sheet

This sheet's gentle **Bronze** tint gives a good level of shade, reducing the sun's glare for roofs exposed to direct sunlight.

Opal sheets transmit some translucent light, but not sight, so provides privacy for overlooked roofs. It also immediately reflects some of the sun's heat.

Offers Quality with affordability

C & A's extremely popular home brand high quality sheeting. Made from pure polycarbonate material and combined with a light weight structure to allow for roofing on a budget but have more rigidity than 4mm twinwall sheets. All the colours admit various levels of light helping to reduce glare. These sheets are the perfect choice for low cost installations of open sided structures, canopies and gazebos.

With world leading technology from one of the finest brands.

These sheets provide increased rigidity and a level of heat insulation that was previously considered unobtainable from a 16mm sheet. These qualities make this sheet ideal for a wide range of canopies and conservatories. Added to this these 16mm sheets have a maximum span (width) without needing extra support or purlins of 1000mm (see page 26 for more info) one of the best value roofing sheets on the market.

marlon Clickloc

Easy-Fit Polycarbonate Panel

EASY-FIT POLYCARBONATE ROOFING PANELS

Marlon Clickloc is an easy-fit roofing panel which provides the ideal DIY roofing solution for Verandas, Canopies or Car Ports. Requiring no glazing bars, the easy-fit panels simply click and lock together to provide an instant roof. Perfect for DIY use, only standard tools are required to install. Simply cut panels to the required length, screw into place, click and lock the next panel and repeat, then finish with a U profile. The panels are manufactured from impact resistant polycarbonate which is hardwearing, durable and long-lasting. This frosted sheet has added UV protection so that you can enjoy the great outdoors whilst being protected from the harmful effects of the sun.

KEY BENEFITS

- Easy to handle
- Light in weight
- Speedy assembly
- Very strong
- Impact resistant
- UV protected

APPLICATIONS

- Carports
- Pool covers
- Canopies
- Veranda covers
- Gazebos & Pergolas

SPECIFICATION

- Transmission

Handling Sheets

> Polycarbonate sheets have temporary plastic cover films on their surface each side to protect them from marks or scratches.

> Plastic cover films also indicate which face is the upper side with the UV protection—this will normally be the film printed with writing.

> As it is almost impossible to otherwise tell the two sides apart, **DO NOT REMOVE** the cover film until the sheet is being laid on the roof.

Cutting Sheets

> Polycarbonate sheets can be easily trimmed using a fine bladed/ toothed handsaw. Power saws should be used with caution and are generally not recommended unless experienced in working with plastics.

> When cutting, support both sides of the cut and saw at a shallow angle with light pressure.

> For long cuts, overlay the approximate cut line with masking tape so an accurate line can be marked.

> Sheet debris from cutting can be removed from the cells with compressed air or a powerful vacuum cleaner.

Sheet Storage

> Polycarbonate sheets stored outside in the open must have sheet ends taped up to prevent insects, debris or moisture invading the cells.

> Stacks of polycarbonate sheets should be covered with a light proof sheet to prevent distortion by magnified sunlight.

+ WE ARE HERE TO HELP!

Simply call us on 01634 374444 or email cs@cabp.co.uk with any issues and we will try to help there and then. Most queries can be resolved in a single phone call.

Online Resources

www.cabp.co.uk

Getting better information has become easier with the Internet, so if you require more information then take a look at our website where you will find various product information and data sheets with the products.

> **DATA SHEETS**—There is a wealth of additional information about our products, including Multiwall Polycarbonate sheeting, that can be found online on our website. Our data sheets can be found under a product's **documents** tab shown on each product's page. This will provide any further product details that we often have direct from the manufacturers themselves.

> **PRODUCT VIDEOS**—In addition to the product information we have written online, you can also view related videos found with the product. You will find a selection of guides and instructions to help with your installation.

Installation Guide & Assembly Video Online

VALE GLAZING BAR

THE SIMPLE SOLUTION FOR ALL FLAT SHEET ROOFING

The **VALE** Glazing Bar is a simple yet hugely popular product allowing users to join ANY glazing sheet material of ANY thickness, with a strong aluminium core and plastic capping. Initially designed for joining Glass panels on lean-to roofs, this bar has also proven very popular with the use of polycarbonate sheeting.

- ▶ C&A's own design
- ▶ One-Size-Fits-All design
- ▶ Use with ALL flat sheet glazing roofing materials
- ▶ In **WHITE** or **BROWN**

BARREL VAULTED ROOFS

The **VALE** bar is ideal for use in barrel vaulted roofs where the structural frame is shaped to a curve. This is because the bar can be pulled to the correct curvature using the fixing screws to a minimum 3 metre radius curve.

USE WITH ANY THICKNESS

The **VALE** Bar can accept any thickness sheet — all that is needed is a long enough screw! **The draw back** to this is care needs to be taken to ensure that the **VALE** Bar is not over-tightened which may cause damage to the glazing sheets. Once secured the PVC Cover Cap clips on ensuring that water can not enter the fixing channel or leak through the roof.

FIXING VALE BARS DOWN

Frames should be flat and stable, made of timber or metal and be at least 45mm wide. The Aluminium Core is screwed on top of the Base Seal every 400mm. At the lower (gutter) end of the roof, bars can overhang the Support Beam by 50mm.

RUBBER SEALS/ GASKETS

The **VALE** Bar is C&A's only Frame Supported Bar which uses rubber Gaskets. The bar consists of a Base Seal which is glued to the supporting beam/ timber, then the screwed down Aluminium Core which houses a further two Primary Seals.

ROOF EDGES/ END BARS

Due to the **VALE** Bar's ability to accept any thickness sheet, we do not supply an End Bar Infill as with our other Glazing Bar Systems. Instead, a packing piece (normally made of timber) is required on the open side of the end bar the same thickness as the glazing material to ensure the end bar is stable and rigid (Fig 1). If polycarbonate is being used the sheet can span across the entire bar, which can be fastened through the sheet itself (Fig 2).

Figure 1. End Bar when using glass sheet

Figure 2. End Bar when using polycarbonate sheet

EDEN GLAZING BAR

- ▶ C&A's own design
- ▶ Frame Supported
- ▶ For 4mm, 6mm, 8mm & 10mm Polycarbonate sheets

The EDEN frame supported glazing bar system for multiwall polycarbonate sheets is specially designed to be a **LOW COST** option.

Manufactured entirely of UPVC with a rubber lipped top cap and base section. The EDEN bar has a single screw fixing through the front and includes drainage channels to allow for excess water run off.

Easy to assemble: simply screw base to supporting timbers and use the push clip system to secure the top cap.

EDEN Bars are 50mm wide.

The base section of our bars should be fixed every 400mm along its length. We recommend that only stainless steel screws should be used.

HAWK GLAZING BAR

- ▶ C&A's own design
- ▶ Frame Supported
- ▶ For 10mm, 16mm, 25mm Polycarbonate Sheets

The Glazing Bar aimed for the Trade, the **HAWK Bar's** design is simple yet strong with an Aluminium Base section.

The **HAWK Bar** is easy to install and visually unobtrusive with a slim 48mm wide base section and low profile PVC top cap.

C&A's well proven design of drainage channels and sealed centre sections for leak-proof fixings within the **Aluminium Core** are a great feature of the **HAWK Bar**.

AVON

ALUMINIUM CORED

FRAME SUPPORTED GLAZING BAR

- ▶ C&A's own design
- ▶ Frame Supported
- ▶ For 16mm, 25mm, & 35mm
- ▶ In WHITE or BROWN

Our best frame supported glazing bar system.

The Avon bar is a 3-piece construction:

1. **Easy-fit UPVC top cap** to secure sheet
2. **Strong high-grade aluminium core** with dedicated central channel for fixings.
3. **UPVC base section** to fully clad bar and add insulation.

AVON glazing bars are thermally efficient due to the full UPVC capping that includes an insulating air gap in the base section. The bar also has wide side channels to drain moisture away, making this bar a top choice for roofing projects such as conservatories.

AVON bars are 58mm wide to ensure wide fluted sheets are correctly secured. They are also available with two different cores for a range of sheet acceptance:

16mm & 25mm and **35mm** sheets.

PEAK 100 GLAZING BAR

C&A's proven own design
Self Supporting up to 4M*
For 16mm and 25mm
Polycarbonate sheets

The **PEAK 100** self-supporting glazing bar system is capable of spanning an impressive 4 metres and is also one of C&A's most complete designs with full UPVC capping, plus additional trims, flashing and structural components.

PEAK 100 Bars have a load-bearing high quality aluminium core, allowing the length of mono-pitch roofs to extend up to approximately 4 metres (*see spanning table on Page 23 for details). Other aluminium components of this system, such as the wall plates and beams/posts, also aid to its strength and durability and are concealed behind UPVC capping, which not only improves thermal insulation but that also make this roofing system visually attractive. Using the **PEAK 130** wall plate, the bars are connected to the host building via pivot mounts, whilst fixed at the other end to the **PEAK 60** beam/post.

YORK GLAZING BAR

- ▶ C&A 's own proven design
- ▶ Self Supporting up to 4M*
- ▶ For 16/25 & 35mm Polycarbonate sheets

**SELF-SUPPORTS
UP TO 4 METRE SPANS***

Designed to satisfy a recent demand for thicker polycarbonate roof sheets that have the highest insulation standards.

These Self Supporting bars are strong enough to hold their own weight without any additional support. Use the Pivot Mounts to attach the Glazing Bars to a wall plate fitted on to the host wall, and fix the other to the front beam (gutter edge).

YORK Glazing Bars are available up to 6M in length for better optimisation when cutting to size, **(these are not self supporting)**.

The **YORK** system has been designed to cater for a wide variety of demands, from small span roofs where a lighter aluminium can be used to reduce cost, to large heavy duty aluminium for larger spans and thicker sheets.

> The System 7

Suitable for roofs with spans of up to 3M with 70mm high Aluminium Core.

> The System 8

Suitable for roofs with spans of up to 4M with 84mm high Aluminium Core.

*See spanning tables on Page 23.

SYSTEM 7 16mm Sheets

SYSTEM 8 25mm & 35mm Sheets

The **System 7** glazing bar has a **70mm** high aluminium core and is the light weight version which spans up to a maximum of 3M. Making this the ideal bar for small roofs.

The **System 8** glazing bar has a **80mm** high aluminium core and is the more robust version that can span up to 4M maximum without support. Also available with the option of a 6M bar.

GLAZING BAR KNOW-HOW

Securing Frame-Supported Glazing Bars

EDEN, HAWK & AVON Glazing Bars utilise snap-down top caps. The base section should be screwed down every 600mm along the length through the sealed centre channel provided for fixings. This allows any water that may ingress under the top cap to run down the drainage channels on the sides of the bars.

The **EDEN & HAWK** bars must have structural support under their entire length, whilst the **AVON** with stronger aluminium core can span across purlins that are no greater than 600mm (approx. 2ft) apart. This makes them ideal as a replacement to corrugated roofs as the structure should not need changing if originally built correct and in good order.

Once the base sections are fastened to the support structure, the sheets are placed in position, ensuring the expansion gaps are included and that a vertical rib of the sheet will be encapsulated by the bar. The top cap is then pushed down into the base section and a set of retaining hooks holds the top cap in place. This can be done with a firm hand or by gently tapping with a rubber mallet. To ensure a seal, the top cap must have pressure on both sides to stop it from toppling over. Therefore if there is no sheet on one side, then a bar end Infill must be used in its place.

VALE glazing bars have a screw down top cap that is intended for the sealing (but not retaining) of glass units or solid polycarbonate. These consist of a rubber base gasket that need to be secured to the structural supports. The glazing is then placed on the base gasket and secured with a Retainer. The aluminium core section with rubber seals is then placed along the joint and fastened through the middle into the supporting structure every 300mm with the appropriate length stainless steel screw.

Timbers for Frame Supported Glazing Bars

The size of the timbers will depend on many factors, including the weather conditions the roof is going to be subjected to and the quality of the timber used. **TABLE A** is a guide only. You must ensure that the support provided is suitable for your application.

TABLE A	LENGTH OF BAR	SIZE OF TIMBER SUPPORT	
		WIDTH	DEPTH
Timber rafter size guide (when at 1M centres)	2.0M (6' 6")	50mm (2")	100mm (4")
	3.0M (9' 10")	50mm (2")	125mm (5")
	4.0M (13' 1")	50mm (2")	150mm (6")
	5.0M (16' 4")	50mm (2")	200mm (8")

Sheet Width & Glazing Bar Spacing

Some Polycarbonate sheet widths available (up to 2.1M) are much wider than they can span **unsupported**, but are available for better sheet optimisation when cutting. The distance between the timber supports for the sheets will depend on the sheet thickness, sheet structure, and the sheet's typical environment (this information can be found in the manufacturer's data sheets). **TABLE B** is a guide only for normal operating environments.

TABLE B	SHEET THICKNESS	6mm	10mm	16mm	25mm+
	MAX SPAN				
Sheet spanning guide for Frame Supported Bars	Without Purlins	600mm	700mm	1000mm	1200mm
	Purlins at 600mm	1000mm	1000mm	1500mm	1500mm

Cutting Bars & Securing Capping/ Beading

We recommend using hand tools when cutting glazing bars. The aluminium and PVC sections can both be cut with a fine tooth hacksaw. When installing secure the PVC glazing caps/ beads by hand wherever possible. A rubber mallet can be used, but should be used with caution as to not cause damage.

Self Supporting Bars

PEAK 100 Bars for 16mm & 25mm polycarbonate sheets on spans of up to 4M.

Designed for mono-pitch roofs with spans up to 4M. This proven glazing bar system has PVC capping on both the inside and outside for an attractive appearance and thermal insulation. An aluminium reinforced wall plate is used to secure the roof to the host building, whilst a PVC clad aluminium **PEAK 60** Beam with optional posts support the roof at the lower end. All fixings are stainless steel and where these are exposed to view, the fixings have colour matched plastic heads.

YORK Bars for 16,25 & 35mm polycarbonate sheets on spans of upto 4M.

Designed for mono-pitched roofs, **YORK** glazing bars are available in two grades – The **System 7** bar will carry 16mm polycarbonate roof sheets up to spans of 3 metres, whilst the heavier gauge **System 8** bar will carry 25mm & 35mm Polycarbonate roof sheets up to spans of 4 metres. Designed to be quick to install with fewer components needed for each bar.

SANCTUARY Bars for 16mm polycarbonate sheets on spans up to 4M.

All-Aluminum construction, these bars are designed to be used with the dedicated wall plate and front beam of the system. These are then all riveted together to create a substantial framework.

Bar Drainage Channels

C&A bar systems specifically for polycarbonate sheets have a sheet retention system that secures the roof sheets and prevents the ingress of water without restricting the essential thermal expansion. Apart from the **VALE** Bar, all our glazing bars do not need rubber seals/ gaskets, which can weather over time and restrict sheet expansion. In extreme weather conditions strong winds may force small amounts of rainwater into the joint between the sheet and the bar's top cap which is why these bars have drainage channels immediately behind the joint leading down to the gutter.

Pivot fixings for Self Supporting Bars

Because of the drainage system designed in all of C&A's glazing bars, the **PEAK** and **YORK** bars have dedicated pivot mounting systems to secure the bars without compromising the drainage.

The head of the pivot mount is slid up the bar and secured from underneath, ensuring the channels are unaffected. The base is fastened to the wall plate or front beam, through the designated holes, and the two parts are linked together with a stainless steel pin.

By being assembled round the pivoting action of the pin, the bars can be set at any angle up to 45°. It should be noted that low pitch roofs can suffer from standing water and the water blow back, increasing the chance of water penetration. It is recommended that roofs should try to be set with a minimum 15° pitch wherever possible to minimise this.

Stainless Steel Fixings

When fixing to aluminium it is important that the correct type of fixing is chosen. Stainless steel has high strength and is very resistant to corrosion making it an ideal choice for any screws, nuts, bolts or pins - C&A mostly supply these.

Untreated steel will rust and weaken over time and although zinc-plated steel has a protective coating to help protect it from rusting, it unfortunately also reacts with aluminium, causing weakness. aluminium fixings do not suffer corrosion or reaction, but are not as strong as stainless steel.

SANCTUARY COMPONENTS

Glass Clear Solid Polycarbonate Sheets Replacement Parts Bespoke RAL Colours

Using the parts listed on this page you can select all the component's to build the roof to your requirements. You also have the option to use any 16mm polycarbonate roof sheets including **Bronze** sheets which offers some shade but does not block out as much light as the **Eco-White** sheets but more than the **Clear** sheets.

Our sanctuary roof system is designed by us and manufactured in the UK and has been an extremely popular canopy roofing system for many years. Should you require a canopy made to a specific RAL colour then we can cater to your design. There are many options available with our sanctuary system all you need to do is call us with details and we can prepare a quote for you.

Marlon R Glaze is the next generation of transparent roof covering and combines a glass like appearance with the high-performance features of Polycarbonate. Designed to deliver maximum value to the homeowner, R Glaze brings a new, higher standard of appearance but remains easy to install and maintain. The sleek 3mm thick glass like panels screw directly onto your structure's rafters without the need for expensive glazing bars, making the installation process quick and easy while providing a highly professional appearance.

Key Benefits

- Glass like appearance
 - Easy to handle
 - Light in weight
- Speedy assembly
 - Very strong
- Impact resistant
 - UV protected

Applications

- Canopies
- Pergolas
- Swimming Pool Covers
 - Carports

CORRUGATED 6MM TRIPLEWALL POLYCARBONATE

Marlon CST Corrugated sheets come in Heatguard or Clear. The Heatguard sheets have been developed with an advanced heat reflective pigment allowing high levels of natural daylight to be transmitted into buildings whilst significantly reducing heat transfer. The clear sheets allow plenty of light and the result is a bright building when both sheets are used a partially controlled temperature with natural light provides a beneficial environment. Marlon CST provides all the durability and impact resistance of corrugated polycarbonate sheet whilst the multiwall structure adds insulation and rigidity. It can be used as a complete roof covering or wall cladding material or combined with fibre cement sheeting.

15 YEAR WARRANTY

- Heatguard up to 20% light transmission
- Heat reflecting pigment reduces solar heat gain by up to 68%
- Clear up to 79% light transmission
- Light in weight – 8 times lighter than fibre cement sheets
- Weight 2.2Kg/LM

MARLON CST CORRUGATED

CLEAR 3" PVC CORRUGATED — CEMENT PROFILE

3" profile sheeting is commonly used for a wide variety of roles in modern DIY. Uses include carports, greenhouses, chicken coops & garden covering - the list can go on.

Available in 2 thicknesses **0.8mm** economy grade and **1.3mm** thickness trade grade. The economy grade is used for installations that are only for short life spans or temporary cover requirements. The thicker 1.3mm trade grade has increased strength and durability which is used when a long life span or a more permanent installation is required.

All corrugated sheets are available from stock with a full range of accessories.

LENGTH	ECONOMY GRADE		TRADE GRADE	
	PART	PRICE	PART	PRICE
1.82M (6ft)	R56CL	£11.50	R106CL	£18.10
2.44M (8ft)	R58CL	£15.40	R108CL	£24.30
3.04M (10ft)	R510CL	£19.30	R1010CL	£30.30
3.64M (12ft)	R512CL	£23.10	R1012CL	£36.40

3" GRP FIBRE GLASS — CEMENT PROFILE

Fibreglass roof sheets have great strength and durability.

They are commonly used as roof lights in agricultural and

commercial buildings. Class 3, 1.83kg Grade is designed for

domestic or light commercial use. These sheets admit light but not sight and are easily trimmed to size with a fine-toothed saw. Higher grade sheeting is available for use on industrial or commercial areas.

CLASS 3 (1.83Kg/M²)

N.B. Class 1 & Class 0 sheets can be supplied to order.

LENGTH	PART	PRICE
1.82M (6ft)	RF336	£39.10
2.44M (8ft)	RF338	£52.20
3.04M (10ft)	RF3310	£65.30

CLEAR 3" IRON PROFILE POLYCARBONATE

ADVANTAGES OVER PVC:

- Vastly stronger than standard PVC sheets
- UV Coated, Blocking up to 99% of harmful UV
- Withstands higher temperatures up to 130°C (PVC: 60°C)
- Improved lifespan compared to PVC sheets
- Easier to install than standard PVC sheets
- Wider cover width

WIDTH: 812mm (2' 7½")

COVER WIDTH : 762mm (2' 6")

Manufactured using Polycarbonate Resin giving an extremely tough durable corrugated sheet. The ideal choice for residential, commercial, industrial and agricultural projects.

Pre-drill sheets before fixing. Holes for fixings must be drilled typically 4mm larger than the fixing diameter to allow for expansion. Drill sheets singularly with a HSS drill bit use **LIGHT** pressure. Support the sheet securely under each hole position when drilling. There should be at least 5 fixings across the width of each sheet which are to be fixed into the purlins and rafters.

28mm DEEP CAP	WDC2	£1.90

This traditional high top corrugated sheet can be used for a wide variety of projects from:

- Porches
- Carports
- Roof lights
- Greenhouses
- Cloches and cold frames
- Side cladding
- Sheds
- Walkways

With its glass clear clarity this sheeting can provide up to 3 times more natural light than vertical glazing, creating a bright environment below. This sheeting is strong but

light-weight making them easy to handle and install. The size of these sheets gives a larger cover area resulting in a faster installation time.

CLEAR BIG 6 PROFILE PVC

SHEET FIXING

BIG 6 PROFILE GRP FIBRE GLASS CLASS 3 1.83Kg/M²

Manufactured from Glass Reinforced Polyester resin (GRP) with unique light diffusing additives which scatter light passing through. These sheets provide effective daylight without hot spots or excessive glare. Can be used in single skin and double skin site assembled applications. Can also be used for insulating intermediate layers to provide improved insulation levels for compliance with current legislation. With excellent impact resistance and a highly durable UV resistant polyester film on the weather face which extends the durable working life of the sheet and helps to prevent the sheets from discolouring under normal conditions. Sheet life should exceed 30 years!

Did You Know?

This type of sheeting is also available in over 900 different profiles, to match all current and most discontinued asbestos cement and metal roofing profiles. If you require a non standard profile, please contact us for a quote.

ONDUVILLA by Onduline

The **Onduvilla** range has been designed at Onduline's Italian design studio with a unique three tone colour shaded finish in Red and Green and also in standard black. Used to create a warm natural colour normally only associated with expensive and heavy clay roofing products. This attractive colour finish combined with the Mediterranean bold roll profile results in an exciting and exclusive roof covering that bestows an attractive aesthetic roof finish to any structure.

The practical design aspects of the **Onduvilla** tile strip range have not been overlooked with an innovative tile lapping system utilising a grooved lap joint to provide enhanced weathering performance. The tiles form an attractive, durable and light-weight roof covering that can either be laid on a roof decking or close boarding. The system is ideal for a wide variety of applications. A full installation PDF guide can be downloaded from www.cabp.co.uk

Onduline® Classic®

Onduline is an extremely tough, lightweight, corrugated roofing and wall cladding material, manufactured utilising a base board produced from recycled cellulose fibres which is saturated with bitumen under intense pressure and heat. Onduline sheets are finished with a colour pigment and resin impregnation process which “stains” the colour into the sheet to provide excellent colour retention properties and enhanced U.V. resistance. Onduline Classic sheets are ideal for a wide range of applications reflecting the materials unrivalled versatility for use on agricultural, industrial, DIY and environmental projects.

CEDRAL 190mm LAP CLADDING

The ideal low maintenance, rot free alternative to traditional timber weatherboard. Fibre cement offers both contemporary and flexible design options, and is used by many architects and homeowners to create stunning facades. The simple combination of wood cellulose, sand, synthetic fibres, water and cement make fibre cement one of the most environmentally friendly and comprehensive building products available.

Hard as stone, easy as wood. The material's multi-layered fibre structure supports the cement and other elements, which gives it impressive strength, and means that it can be far thinner than concrete.

FORTEX™ CLIC 150mm & 180mm

Fortex Clic is an innovative PVC cladding board suitable for a wide variety of home improvement projects and ideal for many external situations. Featuring a clever tongue and groove style joining mechanism, a subtle embossed textured surface and a range of attractive natural colours.

150mm Clic cover width board as a tighter joint along the board overlap giving a more flushed appearance.

180mm Clic cover width board as an open V joint along the board overlap giving a more pronounced joint.

The new ingenious Clic and Fit joining mechanism, is attached on the long edge of cladding making fitting quick and easy, simply push together and click – no need for any joint covers. Comes with an accompanying range of adaptable trims, allowing you to fit cladding boards horizontally or vertically. Ultra low maintenance PVC cladding offers the ultimate fit and forget product.

No need for painting or re touching, just the occasional wipe down with a damp cloth or quick jet wash. Supplied in manageable 3.2 metre boards Fortex Clic is designed to be easy to handle and transport. Ideal for any home improvement or building project.

FROM
£38.19 Sq/M

Typical Installation Sequence

1. Fix a suitable breather membrane to surface.
2. Fix 25mm x 50mm vertical battens at 400mm spacing. Start 200mm from the ground and allow 10mm gap at the top.
3. Fix starter trim along the base and top of the area to be clad.
4. Fix first part of 2 part Edge, Corner and Reveal trims as needed. Do not cut second parts of trims yet.
5. Fit first cladding plank into starter trims and screw top of cladding to batten.
6. Interlock next cladding plank to the first plank and screw into batten. Repeat until area is clad.
7. Finally cut the second part of 2 part trim to size and clip into place.

Typical Installation Sequence

1. Fix a suitable breather membrane to surface.
2. Fix 25mm x 50mm vertical battens at 400mm spacing. Start 200mm from the ground and allow 10mm gap at the top.
3. Fix starter trim along the base and top of area to be clad.
4. Fix first part of 2 part Edge, corner and reveal trims as needed. "DO NOT" cut second parts of trims yet.
5. Fit first cladding plank into starter trims and screw top of cladding to batten. If needed join the ends of boards with butt joints.
6. Interlock next cladding plank to the first plank and screw into batten. Repeat until area is clad.
7. Finally cut the second part of 2 part trim to size and clip into place.

PROFESSIONAL RANGE 333mm Cover Width

Fortex external cladding is a maintenance free cladding system. With the added benefit of helping to insulate your building (when fitted with standard insulation you can achieve an A+ (BRE) Rating). Specially formulated to withstand the test of time using lead free materials and rigorously tested to provide a minimum of a 10 year colour guarantee. Also manufactured in a sustainable manner and comes with significant environmental credentials.

FROM
£28.11Sq/M

Each 5M board provides 1.66Sq/M of coverage

Quick Installation: All cladding boards are fitted using a tongue and groove joint on their height which also hides the fixings.

FASCIA & SOFFIT THE BASICS

CAP-OVER or FULL REPLACEMENT?

10mm Thick boards are for capping over existing timber boards. These must be in good condition and any mild damage or rot should be treated first with a very high grade wood preservative. Before capping, check the Roof Felt has a sufficient overhang to reach the top of the new UPVC board as well as the existing timber one. Over felt replacement sections should be fitted to cover the gap.

18mm Thick boards are for use on new builds and for full replacement on existing buildings

Timber sub-structures should first be examined for damage and rot, which should be treated with a high grade wood preservative or in severe cases cut out and new timber sections added in.

FASCIA & SOFFIT FIXINGS

FIXINGS Use colour-matching plastic headed pins and nails to fix boards into place.

CENTRES Fixing centers vary, but should never exceed 600mm for white boards, 300mm for black boards and 400mm for other colour and wood grain boards.

For more detailed information please visit the product page and click on the specifications tab on our website www.cabp.co.uk

FURTHER INFORMATION ON FASCIA & SOFFIT

Roof Ventilation should be considered, either by using vented soffit boards, Vent disks or over fascia vents. *See pages 50 and 51.*

Plastic headed pins and nails should be used to fix the boards in place fixing centers vary, but should not exceed 600mm for white boards-

we supply colour-matching heads *See page 51 for all colours.*

Gable end covers can be made by cutting a wide capping board to size. Use a 400mm or 600mm board, and fix into position. *See pages 48 and 49.*

CLADDING THE BASICS

PREPARING WALLS FOR CLADDING

Cladding boards should be fixed horizontally over timber battens, **CENTRES** set at a maximum of **400mm apart** upon the host wall. To protect the battens, a breathable membrane must be lightly tacked over the entire area before the cladding is fitted on top.

For more detailed information please visit the product page and click on the specifications tab on our website www.cabp.co.uk

FIXING CLADDING BOARDS

Begin at the bottom of the host wall by fixing starter trims with barb nails through the back of the trim, ensuring the cladding board is located inside the starter rim so the fixings will be hidden by the overlap of boards.

At the sides and corners, fix edge trims/ corner trims as required. Fix any external corners as you progress upwards, to allow for some movement when fitting the boards into place.

Allow a 5mm gap at each end of the board as they are designed to expand and contract with weather changes so it is important they are cut with some space allowance, which will be covered by the finishing trims.

When fitting the last board, it is likely its depth will need to be altered to fit into the available space, and depending on how much board is trimmed away it may be necessary to fix an additional batten behind to ensure it sits correctly. The last board must fit so it pushes up inside the trim's top edge and also sits correctly on the cladding board below.

BULLNOSE FASCIA

The **Bullnose/Round nose** fascia system is a traditional full curved style, 18mm thick fascia board that can also be used as an internal windowsill. Complete with corners, centre joints and end caps (for when using this product for an internal sill).

Fits below the existing roof felt under the bottom row of tiles.

SOLID SOFFIT BOARDS

Used to preserve and protect the underside of any roof edge. Supplied in a large selection of soffit boards, ranging from **Plain** or **Vented solid** soffit to **Hollow** soffits. These boards can also be used in a large variety of other rolls including trimming and skirting.

COLORMAX[™]

The inherent strength of the Colormax[®] technology enables Freefoam to offer a 10-year extend guarantee on all colourmax coloured boards and trims.

150mm HIGH CAPACITY GUTTER & PIPE

The Kommercial range of guttering is 150mm wide and used in commercial applications or areas that require large volumes of water to be drained away. Our Kommercial gutter uses the 110mm soil pipe connections for the downpipe so is easily integrated into both new and existing installations that use standard 110mm soil and underground.

- 150mm half round profile
- 110mm pipe and fittings
- High flow capacity
- Due to greater flow capacity, ideal for large roof areas, Industrial and commercial buildings
- High quality finish

CAST IRON EFFECT GUTTER & PIPE

CAST IRON EFFECT GUTTERING

This unique Cast Iron effect guttering system has been designed to provide you with the authentic look and feel of traditional gutters, using long-lasting uPVC. The mottled effect finish helps to maintain the look and feel of period properties while allowing you to benefit from the low maintenance, fitter-friendly materials available today.

Whilst there is a continuing emphasis on building energy efficient homes, the external design and detailing of many new build developments remains traditional. Cast iron style guttering offers specifiers and property developers the ideal solution for a stylish traditional look giving homeowners a low maintenance long lasting system. The range also allows builders and renovators of period properties the option to update

with modern materials without losing the charm and appeal of authentic features.

The Freeflow rainwater system is co-extruded with a white interior to reduce heat absorption and expansion of gutters and features long-life advanced red compressible seals for ease of fitting and water-tight joints to ensure a leak-free performance.

This high quality product is also available in high capacity 116mm Full-Flo, Please contact us to request a quotation and lead times.

110mm Underground drainage pipe and fittings using Forsheda Seals to ensure ease of installation and all made to BS standards

110mm Underground Pipe and Fittings are compatible with all standard 110mm soil and underground systems in the UK. Kalsi 110mm Underground systems compliments our 110mm soil and our 32mm, 40mm and 50mm solvent weld waste system. The complete system consists of extruded pipe sections and injection moulded fittings and provides an efficient way to convey sanitary waste from all types of buildings.

The components in these systems enable the construction of Soil and Waste installations complying with the requirements of BS EN 12056-2:2000, and with The Building Regulations 2002. Building Standards (Scotland) Regulations 1990. Building Regulations (Northern Ireland) 1990

BS 3943:1988: Specification for plastic waste traps. BS 4514:1983: Specification for unplasticised PVC soil and ventilating pipes, fittings and accessories. BS EN 1451:2000 Plastic piping systems for soil and waste discharge within the building structure – polypropylene. BS 5255:1989: Specification for thermoplastics waste pipe and fittings. .

Kalsi solvent weld products are ideal for both the trade and diy applications. Used throughout the home and industry for removing waste water from sinks, baths and other applications it is the popular chose due to being extremely quick to install and use with minimal wait times of just a few minutes. 32mm 40mm & 50mm Solvent waste pipe and fittings come in both **BLACK & WHITE**.

This easy to assemble product range that requires only the most basic of tools gives you a bond in seconds. The end result is a perfect seal and professional finish to every job.

Solvent Cement waste systems give that solid connection avoiding the problem of moving pipes and joints that can come apart resulting in unwanted floods.

All our waste products are manufactured to the following British Standards

BS 5255:1989

BS 4514:1983

20mm, 25mm & 32mm MDPE Fittings

Blue MDPE plastic pipe is designed for below ground

use, however it may be used above in ground situations where it is not exposed to light and is protected against: undue warming, freezing and potential contamination from the environment.

Due to the way modern MDPE is made they have a life span of well past 50 years and has been used for all drinking water installations on new builds for many years.

General Features

- ◆ Improved sound quality
- ◆ Reduced noise transmission between rooms
- ◆ Suitable for commercial and residential spaces

Acoustic Wall Panels offer both form and function – striking, modern interior aesthetics combined with acoustic performance.

These decorative panels feature a 3D slatted structure that not only looks amazing, but also provides real sound proofing benefits – absorbing excess noise and echo in your home.

Easy to install, each panel measures 600 x 2400mm available in a selection of wood effects so you can find the perfect match for your living space.

Supplied as a pack of 2 measuring 600 x 2400mm

Noise Reducing

HIGHLY VERSATILE SOLID CLEAR POLYCARBONATE

IDEAL FOR:
> Greenhouses.
> Secondary Glazing.
> Security Glazing.

+ Solid Polycarbonate is 200 times stronger than glass and can be used in many everyday applications. Common uses include re-glazing sheds, greenhouse glazing, secondary glazing, plus 1000's of other uses around home and work.

CLEAR SOLID POLYCARB

UV Protected both sides

This highly versatile product is totally glass clear, with an impact resistance 200 times greater than that of glass. All these sheets have a UV coating on at least one side to stop UV deterioration, ensuring a longer life span (Always check when installing to eliminate the chance of installing the wrong way around). These sheets are extremely easy to cut and drill making them an ideal DIY friendly glazing alternative.

SECONDARY GLAZING STRIP

PART	PRICE
FT24WH	£6.00

2.44M (8ft) WHITE

Easy to install, 2.4M long strips will accept 2mm or 3mm panels. The strip is in 2 sections, the inner section is pushed around the edge of the sheeting and then screwed into the frame, then the top screw cover is pushed into place. to hide the fixings.

SECONDARY MAGNET GLAZING

PART	PRICE
MG5	£26.40

5M (16' 4") Per Roll

Two self-adhesive strips, one part is magnetised, the other steel. Applied by sticking one part to the framework and the other to the sheeting. Once installed it will be magnetically held into position making it easy to remove for cleaning or access.

IDEAL FOR: Bathrooms, Wet Rooms, Food Preparation Areas & Clean Rooms

GLOSS WHITE PVC PANELS

Chemically resistant with a **Class 1 Fire Rating**. These 2440mm x 1220mm (8' x 4') panels are impervious to water and when installed correctly are compliant with statutory regulations for wall coverings in areas of food preparation and packaging. If the area you wish to apply the sheets to isn't smooth and flat then the 3mm should be used for it's increased rigidity.

MULTI-TRIM WHITE

2.44M (8ft)

Designed for use with the 2-3mm white PVC sheets. The clever design has a flexible co-extrusion along the centre to accommodate any angle from 90°-270°

As an H Joint

FOR INTERNAL AND EXTERNAL USE

Skybond ACM (Aluminium Composite Material) panels are high-quality, versatile materials used in various applications

Key Features:

- **Construction:** Skybond ACM panels consist of a low-density polyethylene core sandwiched between two 0.3mm aluminium skins
- **Durability:** They are highly resistant to corrosion, weathering, and warping, making them suitable for both indoor and outdoor use
- **Lightweight:** Despite their strength, these panels are lightweight and easy to handle
- **Formability:** They can be easily cut, routed, bent, roll-formed, and hot air welded, making them highly versatile for various fabrication needs
- **Printing:** Suitable for direct-to-substrate digital printing, screen printing, and applying graphics
- **Finish:** Available in various finishes, including gloss and brushed, to suit different aesthetic requirements

SKYBOND

Aluminium composite sheet

Applications:

- **Signage:** Ideal for both indoor and outdoor signs, including illuminated and permanent signs
- **Displays:** Used in exhibitions, in-store graphics, and point-of-purchase displays
- **Construction:** Suitable for cladding, splashbacks, and other decorative applications
- **Fabrication:** Used in shop fit-outs, exhibition booth construction, and other structural applications
- Skybond ACM panels offer a combination of strength, durability, and versatility, making them a popular choice for a wide range of applications.

Armstrong PRELUDE EXPOSED CEILING SYSTEM

Armstrong suspended ceilings are designed for maximum effect with modest cost and fast installation times. The professional steel framing interlocks for rigidity and is fully Fire Rated for areas with public access. An easy to assemble system that gives you a neat and clean finish to any ceiling.

ITEM NO	DESCRIPTION	PART	PRICE
1	Main "T" 3.6M (11' 9")	CFT36	£9.40
2	Spacer "T" 1.2M (3' 11 1/4")	CFT12	£3.20
3	Spacer "T" 0.6M (1' 11 1/2")	CFT06	£1.50
4	Suspension Wire 10M	CW10	£4.10
4	Suspension Wire 100M	CW100	£30.40
5	Wall Angle 3M (9' 10")	CWF3	£6.10

The white-faced, galvanised, steel interlocking frame is fast and easy to install. An angle section is fitted around the walls, then the main 'T' sections rest on these and reach across the room. The spacer 'T's are then fitted to create the desired tile space.

CEILING TILES Prismatic, Fissured & Sandgrain

FISSURED Tiles

The non-directional FINE FISSURED surface is easy to install and effective for sound absorption. Ideal for use in circulation areas, meeting rooms, cinemas etc.

Fissured face tiles meet the EEA Euro class A2-S1 Fire Rating standard. With excellent sound and heat insulation properties, they have a pale surface that reflects 75% of ambient light and are easy to cut and fit.

DUNE EVO TEGULAR

The non-directional tiles have a fine sand grain finish with a lipped edge so the tile sits below the framework rather than on it, to create a 3 dimensional ceiling. Ideal for use in schools and offices. Meeting the EEA Euro class A2-S1 Fire Rating standard, it has high sound and heat insulation properties with the further advantages of being highly resistant to humidity and water with a surface that reflects 85% of ambient light.

PRISMATIC Panels

Prismatic panels are translucent allowing light to pass through them into the space below, two versions are available in both the Oblong and Square sizes. Clear panels have a diamond pattern on the lower surface and transmit the most light, whilst the Opal panels diffuse the light to reduce shadows.

PANEL TYPE		595mm X 595mm			1195mm X 595mm

All our ceiling tiles are designed to fit standard ceiling systems that accept 595mm x 595mm or 595mm x 1195 tiles.

For our online guides and parts list calculator please see our website www.cabp.co.uk

HAVING TROUBLE?

Call or Email us and we can help calculate the materials required

Q: What is a roof dome?

A: Roof domes are basically windows in flat roofs.

Q: Where do I use a roof dome?

A: On any flat or low pitched roofs that do not exceed 15 degrees

Q: What size do I need?

A: This depends on the size of the hole you have or wish to make. See tables for guide.

Dome Size—Roof Hole Sizes
subtract 140mm from the Overall size quoted
(example: a 600mm x 600mm dome would have internal sizes of 460mm x 460mm).

mardome reflex

A range of glazing only units designed specifically for refurbishment projects where the glazing only needs to be replaced. These units are supplied with a fixing kit including weathertight washers and cover plugs. Manufactured from Marlon FSX Longlife polycarbonate, these glazing units are up to 200 times stronger than glass. The high resistance to breakage and adverse weather Conditions means Mardome Reflex is very safe and reliable.

- Faster. Quick and easy to install.
- Safer. Durable, slip resistant, split and splinter-free surface.
- Choice of grooved or woodgrain effect finishes in three colours.
- Low maintenance.
- Hidden fixing system.
- Environmentally friendly.

Have more time to do what you love on a composite deck. A high-performance, eco-friendly wood alternative, that offers the warmth and appeal of natural hardwood without all the time and expense of regular maintenance. Choose from a range of colours and finishes to suit your style and budget. Finishes can be 'mix and matched' or reversed after a period of time. Deck boards are quick and easy to fix using the supplied grab clips - a simple 2-step operation. Composite Decking is slip resistant, splinter-free and very low maintenance with no requirement for annual treatment or oiling to keep that 'just installed' look.

COMPOSITE BALUSTRADE SYSTEM

Designed to deliver standout aesthetics and long lasting performance, our composite railing system provides a robust, low maintenance alternative to traditional timber balustrades.

Engineered for strength and durability, the composite structure will not rot, warp or splinter, ensuring reliable integrity in all weather conditions. This makes it a smart and safe solution for both residential and commercial environments.

For hassle free installation, our balustrades are supplied in convenient module packs, allowing large areas to be completed quickly and efficiently. All fixings and post brackets are fully concealed once installed, creating a clean and refined finish.

Thanks to its high performance composition, the system requires no annual painting or treatment—unlike timber balustrades. The superior weather resistant surface keeps the railing looking its best for longer, with only minimal cleaning needed.

- 1 x composite top rail
- 1 x composite bottom rail
- 2 x base supports

PLEASE NOTE: This kit comes with one balustrade post kit. To finish the run you will need to purchase an extra post kit.

Balustrade single post kits contain

- 1 x post
- 1 x post cap
- 1 x post cover
- 1 x post base

Kit Size: L 1800mm x H 1030mm (post height)

COMPOSITE SLAT WALL

Premium slatted style composite cladding designed for modern residential and commercial applications. Manufactured using a durable blend of 55% recycled wood fibres, 35% recycled HDPE, and high grade additives, each board is finished with a UV stable PVC film for long lasting colour and weather resistance. The innovative click over system allows boards to be secured with concealed fixings, giving a clean, seamless appearance without visible screws.

Key Features

- Modern Slatted Design – Contemporary aesthetic suitable for all building styles.
- Hidden Fixing System – Boards screw into the battens, and each subsequent board
- Low Maintenance – No painting or sealing required; simple periodic cleaning with warm soapy water.
- UV Stable Coating – Boards may experience natural fade of up to 10% over 3–6 months.
- Sustainable Construction – Made from high levels of recycled materials.
- 10 Year Warranty – Covers splitting, cracking, rotting, and manufacturing defects when installed according to guidelines.

Trim & Accessory Options

A full range of trims is available to create a complete and professional finish:

- Corner Trim – For 90° external corners or continuing boards around corners
- End Trim – Neat finishing at the end of cladding runs
- Connector Trim – Joins male and female ends; enables 360° wrapped installations

Recommended Tools

A composite fencing system to enhance any garden.

Easily installed aluminium posts are available with two different anchoring systems: bolted directly to pre-existing concrete base using flat bottomed supports; or impaled in concrete using spike supports. Featuring 4 separate slots, the aluminium posts allow for multi-directional installation - straight, 90° or T-section. Boards can be used as replacement panels with post adaptor, simply slot the post adaptor into the channel in existing concrete posts and slide the boards into place. Use the top and bottom trim kit to complete the look.

- ◆ Better. Long-lasting and durable, will not rust or rot.
- ◆ Faster. Quick and easy to install.
- ◆ Safer. Strong, impact resistant, split and splinter-free.
- ◆ Woodgrain effect finish to both sides.
- ◆ Low maintenance - no additional oiling or painting required.
- ◆ Ideal for replacement panels or new build projects.
- ◆ Fade resistant (can fade up to 10% in the first 6–8-week period, thereafter stable).

ADHESIVE SEALANT — FIX ALL

ALL you need is... Fix ALL

Fix ALL® products from Soudal have been in the market for over 25 years. The Fix ALL® brand has continued to evolve and diversify into the comprehensive range of hybrid polymer sealants and adhesives of today. Currently, Fix ALL® generates worldwide sales of more than 10 million cartridges sold in over 130 countries. The brand continues to grow strongly year after year. Soudal continues to invest heavily in the Fix ALL® brand and was one of the first pioneers in the production, development and sale of hybrid polymers.

Fix ALL® is now recognised as one of the most innovative and trusted hybrid polymer sealant and adhesive brands on the market. The sealant and adhesive range is based on their patented SMX® Hybrid Polymer Technology, developed through market-leading chemistry, offering formulations with a choice of superior flexibility, initial grab, speed, bond strength, or a combination of these characteristics in clear and coloured varieties.

FIX ALL FLEXI

Multi use sealant, adhesive and filler with high flexibility. Can be applied in all weather conditions. Internal and external use. Primerless adhesion on most construction materials, including wet and damp surfaces. Contains XS1 fungicides providing ultimate mould resistance.

HOW TO ORDER

> **ONLINE** – Go to www.cabp.co.uk

Our Online Shop is open all day, everyday, 365 days of the year. You will find all of our products listed online, plus any special offers we currently have running. With our fast and secure servers you can be confident that all of your information is securely encrypted. Our automated shopping cart calculates your bulk order discounts for you, so getting quotes and placing orders is made fast and easy.

> **BY PHONE** – Call - 01634 374444 - 0207 474 0474

Our sales team are on hand to provide advice on materials and to put together quotes and orders for you based on your requirements. With payment by card, orders will be processed immediately with a detailed Order Acknowledgement sent immediately for confirmation. For cheque payment, your order will be prepared and processed as soon as the cheque has cleared.

Our sales team are available 7:30am – 4:00pm Mon – Fri

> **BY POST** -- C & A Building Plastics, Courteney Road Gillingham Kent ME8 0EZ or Bidder Street, London E16 4ST

Use the Order Form at the back of this catalogue should you wish to order by post. If ordering on your own stationery, please list your requirements in the following order; PRODUCT/ PART No/ UNIT PRICE /QUANTITY/ TOTAL COST. Total the cost of your materials, subtract any bulk order discount applicable, add the delivery cost, and then add VAT. Send your order with payment in full by cheque, made out to *C&A Supplies Ltd.*

> **OVER THE SALES COUNTER**— See website for branch opening times www.cabp.co.uk

Cash and card payments are accepted, but we do not accept cheques for trade counter orders. **PLEASE NOTE:** Payment over the phone for collection and cash on delivery facilities are NOT available. Ledger accounts will be considered for regular customers.

DISCOUNTS

If you are working on any form of building project then you want to save as much money as you can. At **C&A** we try to keep costs as low as possible.

“CandA Club” Want a fixed Discount on orders then join our membership scheme, see the website or call for details

Many of our products now have a quantity price breaks so when you're shopping in bulk you can save. Also checkout the clearance section online.

TRANSPORT & STORAGE

All plastic building materials should be kept flat during transport and storage. If stacked, materials must then be covered with a light -proof sheet to prevent direct sunlight overheating the interior of the stack, with all products flat and level without excessive weight on the bottom layers.

In these terms and conditions - "C & A Building Plastics" means, C & A Supplies Ltd and any other connected organisation that supplies the goods ordered by you and any successor to its business; "We and Us" means C & A Supplies Ltd either alone or together with you, as the context requires; "Working day" means every day of the year except weekends, and English statutory and public holidays; "You" means the person ordering goods subject to these terms and conditions.
C & A Supplies Ltd, Courteney Road, Gillingham, Kent ME8 0EZ.
Registered in England no 3895992 VAT Registration no. GB 248096048 To contact us please ring 01634 374444 or by email to cs@cabp.co.uk

Privacy Policy Statement - You can view or update the information held by us on request by emailing gdpr@cabp.co.uk, this includes asking to be removed from future catalogue and email marketing and the deleting of personal data.

Customer order fulfilment data - In the interest of order fulfilment the company processes your data and information in accordance with the GDPR legislation under the lawful basis of 'contract'.
GDPR Article 6(1)(b) "processing is necessary for the performance of a contract to which the data subject is party or in order to take steps at the request of the data subject prior to entering into a contract". This can involve the automated processing of the data to fulfil these interests.

Customer marketing data - In the interests of marketing the company processes your data and information in accordance with the GDPR legislation under the lawful basis of 'legitimate interest' as you have shown interest and / or had contact with the company and / or one of its marketing efforts. Examples include but are not exhaustive; meeting at exhibition or interaction with the company including its website.

Data to third parties - Your data is not sold to other parties, and is only processed in order to fulfil the 'contract' or 'legitimate interest'. Some of your details may be shared with a third party, which will be used for the purpose of fulfilling the 'contract' or 'legitimate interest' as a reasonable step, and these third parties themselves are required to be compliant with GDPR legislation. This is limited to the information we believe is relevant to fulfilling the targets within the lawful basis, with the minimum of hindrance in variable environments, without the privilege of hindsight to individual circumstances without forewarning.
GDPR with regards to other legal data storage requirements - Personal data that has been requested for any alteration will be complied with to the extent that is permissible given other legislative compliances that we must also adhere to. These include but are not exclusive to the prevention or investigation of a suspected / potential crime and HMRC requirements.

Your Order—You will have an opportunity to check and correct any errors on your order up until the point at which you submit and pay for your order. All orders made by you through cabp.co.uk are subject to acceptance by us. We may choose not to accept your

order for any reason and will not be liable to you or to anyone else in those circumstances. After submitting an order to us we will send you an order acknowledgement email with your order number and details of the goods that you have ordered. Please note this email is an acknowledgement and is not an acceptance of your order. Stock availability information is not available on cabp.co.uk. If you order goods which are not available from stock, we will contact you by email or by telephone to discuss how you wish to proceed. You will have the option to wait until the goods are available from stock or cancel your order in accordance with our returns policy. Unless we have notified you that we do not accept your order or you have cancelled it in accordance with our returns policy, we accept your order 7 days after the date of order or when the goods are delivered, whichever is earlier.

Liability – We shall not be liable to you where performance of any of our obligations to you is prevented, frustrated or impeded by reason of acts of God, war and other hostilities, civil commotion, strikes, accident, lock outs, trade disputes, acts or restraints of Government, imposition or restrictions of imports or exports or any other cause not within the reasonable control of C & A Supplies Ltd. If any part of these Terms and Conditions is found to be unenforceable as a matter of law, all other parts of these Terms and Conditions shall not be affected and shall remain in force. All sizes quoted are approximate. Where C & A Supplies Ltd agrees to provide a specifically designed plan, the Customer agrees to check the accuracy and suitability of the plan. C & A Supplies Ltd cannot advise on planning permission or building regulation issues. Asbestos may be found in some older properties. If you have any concerns about the presence of asbestos you should seek advice from a licensed asbestos company. The Customer is responsible for obtaining all necessary planning permission and local authority consents and permissions for any work to be carried out. Any plan drawn by C & A Supplies Ltd is, and remains, its property and may not be reproduced in whole or in part without its previous written consent. To the extent permitted by law, C & A Supplies Ltd accepts no liability for any loss, damage or injury arising as a consequence of the advice provided.

Law - These Terms and Conditions and any contract between us shall be governed by and construed in accordance with English law and the English Courts shall have jurisdiction over any disputes.

Prices – The prices of the product are clearly shown with and without VAT online and without VAT in our catalogue. Prices do not include delivery charges. On occasion, the prices payable in respect of goods advertised on cabp.co.uk may differ from those prices payable at the same time in C & A Supplies Ltd branches. We are under no obligation to honour any cabp.co.uk prices in the event that they differ from those in branch. Similarly, we are under no obligation to honour in-branch prices in the event that they differ from those on cabp.co.uk. Prices that are reduced for sales and promotions are only valid for the specified period and that branch offering those items. We reserve the right to adjust prices, offers, goods and specifications of goods on cabp.co.uk at our discretion at any time before (but not after) we accept your order.

Although we endeavour to ensure that all pricing information on cabp.co.uk is accurate, occasionally an error may occur and goods may be mispriced. If we discover a pricing error we will, at our discretion, either contact you or ask you whether you wish to continue with the order at the correct price or notify you that we have cancelled your order. We will not be obliged to supply goods at the incorrect price.

Force Majeure—When market forces effect our cost prices and we can not absorb these then prices charged may vary from our catalogue

Discounts – From time to time we offer discounts and promotions and are given at C & A Supplies Ltd.'s discretion. We reserve to right to change or withdraw these at any time.

Product availability - C&A reserves the right to alter published prices and specifications and withdraw products and services without notice. We will not be held responsible for any costs incurred by a customer when a price, specification, product or service is withdrawn or changed. Where a customer has placed an order based on an obsolete price, specification or service, C&A will inform the customer and wait for further instruction. If payment has already been made for such goods or service, the customer shall be entitled to a full refund for all items that are not then required.

Property – Property of the goods shall not pass to the customer until payment is made in full. If the customer defaults in punctual payment of any sum due we shall be entitled to repossess any goods that remain our property.

Payment - The total cost of your order is the price of the goods and delivery charges as set out in our delivery information. Payment can be made by most major credit or debit cards, PayPal, bank transfer or cash. You must confirm that the credit/debit card being used is yours, all credit/debit card holders are subject to validation checks and authorisation by the card issuer. If the issuer of your card refuses to authorise payment we will not accept your order and we will not be liable for any delay or non-delivery and we are not obliged to inform you of the reason for the refusal. We are not responsible for your card issuer or bank charging you as a result of our processing of your credit / debit card payment in accordance with your order. PayPal payment orders will only be accepted for orders that are for delivery and are subject to PayPal's confirmation of funds. This can in some circumstances take several days. Bank transfers are manually checked and verified, and although you can have instant transfers this does not mean that we are able to instantly check and validate the payment. This process can take a few minutes or a couple of days and no agent should be sent to collect an order until after you receive your order acknowledgment. Cash will be checked to verify its legitimacy and legality, cash will not be accepted if it is not legal tender or if we have any suspicion as to its legitimacy.

Colour – Due to batch production C&A cannot guarantee a colour match between materials ordered and supplied on separate orders or products of different dimensions. Colours shown online or in our catalogue are a representation and may not reflect a true likeness.

Fitmess of goods - No goods are sold as fit for any particular purpose. All hints, tips and work practice advice published by C&A in its catalogue, web site and advertising are given without detailed knowledge of the customer's application and cannot be relied upon. Customers must satisfy themselves that materials ordered meet the building regulations and codes relevant to the purpose for the intended use.

Faulty Products – If the product you purchase is faulty we may offer a repair, exchange or refund as appropriate in accordance with your consumer rights. Please call us on 01634 374444 or emailing cs@cabp.co.uk

Delivery - The products that C & A deliver are often large in dimension, therefore optimised routing of specialist vehicles is often undertaken to perform the deliveries. This often means that accurate dates are not available at the time of placing the order and an estimated timeframe is given. We make 98% of all deliveries within 10 days however it is suggested that you allow up to 30 days if your project is time sensitive. For this reason, delivery time is not considered of essence of the contract unless specifically set out in writing with special delivery charges and acceptance. C & A will do all that it reasonably can to meet the date given for delivery. In the case of unforeseen circumstances beyond the reasonable control of C & A, we cannot be held responsible. In such circumstances C & A will contact the Customer and agree an alternative date. The Customer will also do all that he/she reasonably can to enable the delivery to take place on the given date. In the case of unforeseen circumstances beyond the reasonable control of the Customer they must contact C & A and agree an alternative date. The delivery service is for delivery to the sites kerb side only, C & A are not responsible for placement into gardens, and building sites etc. and the customer should ensure that suitable labour is provided for this at the time of delivery. As soon as C & A has delivered the goods, the Customer will be responsible for their safekeeping and C & A will not be responsible for any damage or fault arising from incorrect storage. If the Customer delays a delivery, C & A's responsibility for everything other than damage due to its negligence will end on the date C & A agreed to deliver the order as set out in the contract. Ownership of the goods shall remain with C & A and shall not pass to the Customer until the agreed price for them, together with all other sums due from the Customer to C & A, have been paid in full. Any estimated time scales advised are working days from the day following the order date.

Damaged or missing items collected - It is the customer's responsibility when collecting goods from our premises to check they have all the items ordered and that they are in good condition. C&A cannot accept responsibility for damage or shortages once collected goods have left our premises. Where a customer has

arranged for a third party to collect goods on their behalf, the same conditions apply as it is your responsibility that your agent undertakes this. Claims for damage will not be accepted once the items have been loaded on to the customers or collecting agents vehicle

Damaged items delivered - Deliveries by our own transport must be checked with our driver at the time of delivery and any damage must be clearly noted on the paperwork before you sign. Deliveries by carrier that have arrived damaged should not be accepted unless the carrier accepts the damage and can provide written confirmation to that effect. Signing "unchecked" or similar is agreeing to accept the delivery damaged or otherwise. C&A will not be liable for any costs or compensation for damaged items when notified at a later date. We may ask you to send photos to better understand which items are damaged.

Missing Items Delivered - You must contact us within 72 hours with details of the suspect missing items. Notification after this time will result in claims being rejected. The customer is responsible for storage of all products delivered, if you request items to be left without a signature then you accept full responsibility for missing or damaged items.

Returns Policy - C & A Building Plastics are proud of the products we supply and want our customers to be happy with the products they purchase. To this end we offer a 14 calendar day returns period where we will accept return of our standard products that are in resalable condition, even if it's just because you would prefer a different colour, you can return to either branch. Due to ever increasing costs a £10 admin + 20% restocking fee will be applied to all returns, for items brought on the trade counter or after 14days for delivered items. You will be informed of these charges before your return is accepted. The 14 day returns excludes non-standard products specially ordered or have been customised to your requirements; for examples domes are manufactured to your requirements from specific specification criteria and so are custom made. The entire product that you purchased must be returned, we cannot accept a component of the product on its own. Simply contact us within 14 days and inform us in writing that you wish to return the product and then return the item with a copy of your acknowledgment / invoice that includes the products being returned within 30 days from your request to return. Upon return we will inspect the items to ensure they are in acceptable condition. Those that are damaged, dirty or otherwise deemed to be in an unsaleable condition will not be accepted for refund. If the returned items are part of an order with multiple items on it and not all items are returned then the delivery charge will not be refunded as it will be associated with the items not returned. If the entire order is returned then the standard delivery charge that would be applicable to the items will be refunded.

The additional value for a premium service will not be refunded for example express services. It is **your** responsibility to return the items to us, you are responsible for their safe transit and the costs incurred in their transportation. If you are returning the product to a branch we must be notified which branch this is when you notify us in writing. If you are unable to return the items yourself, we can

arrange for the return transportation. Due to the various different products we supply and their varying degrees of difficulty in transportation we are unable to give the exact costs for the products return, however we will estimate these costs at the time of applying for the return of the items. Our vehicles are delivery vehicles and to divert a vehicle to collect a return will not be less than £100 but could be more depending on location and materials. Delivery charges do not reflect the true economic costs involved in their dispatch, to this extent, the cost of return deliveries are therefore not subsidised and can be higher than those charged for dispatch. Goods can only be collected from the site at which we made delivery. We will attempt to make the collection within 30 days from the agreement. The driver is not responsible for checking the condition of the materials. Checking the returned materials takes place when received back at the depot and their condition is assessed.

If your order qualified for a discount then any credit will be calculated on the actual price paid and not the listed price. For example an order of £1000 with a discount of 10% has a product returned of the value of £100 list price, proportionally this item was discounted by £10 to achieve the discount and so the price paid for the item was in fact £90.

If you are returning multibuy items then these must be returned as the original quantity to qualify for a refund. For example you buy 12 tubes of sealant on a multi buy discount then you can not return less than that original 12 for a refund.

Refunds are made in the same format as the payment was made unless otherwise specifically agreed and will be made within 14 days of the return being checked and accepted.

OUR DELIVERY SERVICE

The sheer size of many of the products dictates that special care with handling and transportation is required. For these, C & A deliver most products directly to the customer using our custom-built vehicles operated by our own employees. The route planning for these vehicles is dependent on the areas from which new orders are received and is calculated on a daily basis, but we aim to visit all areas of the UK at least once every 10 working days. Please note that whilst we try to maintain a 10 day rota, there are many factors beyond our control that prevent us offering any guarantee of any delivery dates (Floods, Snow, Road Closures etc) We will always try our best to make every delivery but should we ever have to abort then we will always contact you. When your order has been dispatched we will send an email and a text message. Please note this message is only to advise you that your order is on its way. We always ring the customers the day before delivery, this is normally the driver and they will provide you with an expected delivery time scale. If there are any unforeseen delays whilst on route we will contact you with an update.

SMALL ITEMS—Orders for small items will normally be sent by carrier or post as this maybe the fastest method of delivery, customers will need to sign for these deliveries. Customers with very specific build dates are advised to order at least 28 days in advance and should be prepared to store the materials on site. Urgent orders can sometimes be sent by carrier on a next day delivery service but you will need to contact us directly to ascertain the feasibility of the products you require and the cost of doing so.

DIRECT TO CUSTOMER— Some products are delivered "Direct-To-Customer" as they are shipped from the manufacturer. These deliveries are normally an AM or PM delivery time and date and we will always advise the customer of this as soon as we have the information. This is normally the day before the delivery.

SPECIAL / URGENT GOODS— It may be possible to load special or urgent deliveries onto a C & A vehicle that is scheduled to cover a different area or arrange for another driver to make the special delivery. Customers wishing to enquire about Special / Urgent delivery should contact us for availability and cost, but should bear in mind that vehicle running costs are £275 a day and our delivery schedules deal with a volume of customers all over the UK, therefore we cannot delay a vehicle that already has a full load of orders and which is ready to depart. For both C&A transportation and carrier, remote areas of the UK may incur a higher delivery cost than those listed, in which case the customer will be advised of the delivery cost before order acceptance.

STANDARD DELIVERY CHARGES

White, Grey & Dark Grey Zones

Here at C & A Building Plastics we supply a wide range of materials of all different shapes and sizes, many of which are very large and require extra-large vehicles for the transportation. We only charge one set delivery charge, regardless to the quantity or mix of materials ordered, and these delivery charges often do not cover the cost involved. We welcome customers who wish to organise their own transport to collect materials; but we understand this is not possible for everyone and so offer this delivery service.

These charges are for deliver to the site kerb side, or nearest permitted available parking position, on our standard delivery service (you need to ensure that suitable labour is available on site for the handling of the materials purchased). Additional services are available such as two man delivery, express delivery, specific date delivery, but these are subject to availability and are by quotation only, if you are interested in these services you should call 01634 374444 for a quote. With the wide variety of products, some materials are more difficult to transport than others; so we have colour coded the products to help represent this and charge different delivery prices accordingly. Below is our delivery charge table detailing the standard delivery prices:

Standard Delivery Charges

The largest item on your order is used the calculated the delivery charge. Use the colour of the product code box in the price tables to work out your delivery charges. Green & Turquoise bands are weight based and large/heavy orders may be charged at the higher rate.

SIZE	Product Colour Code	Price From
Small	GREEN	£4.00 - £10.00
Medium	TURQUOISE	£20.00 - £30.00
Large Lengths	PURPLE	£30.00
Large	YELLOW	£40.00
Extra Large	BROWN #	From £150.00

BROWN Coded Products are delivered in the white ZONE ONLY or collected from store

STANDARD DELIVERY TIMESCALES

White, Grey & Dark Grey Zones

The timescales quoted here are for our standard delivery, and are subject to the materials being in stock at the delivering depot, at the time of the order being placed. 98% of all orders are delivered within the timescales quoted below and, most are delivered within only a few days. The table below is for guidance only, and not as a guarantee. We always notify you before delivery is due to ensure someone is available. If you require a specific date delivery you should call us on: 01634 374444 for a quote.

Post Code Colour	Normally within 'X' working days
WHITE	0-5
LIGHT GREY	0-10
DARK GREY	0-15
DARK BLUE	BY QUOTE

LONDON & SURROUNDING

Dark Blue Zones: Due to the locations of these zones and the specific logistic issues they represent, delivery charges and timescales are by quotation only. Please call us on 01634 374444 for a personalised quote.

C&A Building Products

Tel 01634 374444 www.cabp.co.uk

We were founded in 1968 by our original husband and wife team, Charles and Audrey, who both recognised early on that plastics were set to play a major role in the future of construction. At the time, plastics were still relatively new to the industry, but our founders saw real potential in combining these innovative materials with their existing carpentry skills. This naturally led them toward producing made to measure canopies and carports, which could be supplied either as a self assembly kit or with a complete installation service. These early products shaped the foundations of the company we have become today. From these beginnings, we steadily expanded from canopies and carports into bathroom products and a wide variety of additional lines.

Because of the strong progress made in those early years, we have grown to become one of the UK's largest independent distributors of PVC corrugated and polycarbonate multiwall sheeting. Our long-standing experience means that manufacturers frequently approach us to discuss how suitable their products may be for the UK market before they commit to full scale production. This is a position we are proud to hold and constantly work to maintain. Staying ahead of market changes, however, is something that even established businesses can struggle with from time to time. In the 1990s, we did not immediately identify the emerging demand for UPVC fascia and soffit products, which meant we spent some time catching up with this growing market. But we moved quickly, and from that experience learned the importance of listening closely to our customers and taking every suggestion seriously. This dedication to feedback has played a major part in helping us develop our own complete range of roofing bars. Over many years we have designed and produced products with a variety of features and benefits—the Avon, Vale, Eden and Peak glazing bars being key examples. Each of these has been created fully in-house, with the intention of giving customers choices that meet their specific needs. Although these products achieve the same overall purpose, they each offer different strengths, functions and unique characteristics. We truly aim to offer something suitable for everyone.

Despite our growth, we still operate today with the same principles that guided our founders. We remain a family run company with a strong belief in continuous improvement and a genuine desire to help our customers. We work closely with industry experts and economic advisers to ensure we stay at the forefront of developments and continue to offer products and services that deliver excellent value. Our customised delivery vehicles allow us to operate a flexible UK-wide delivery service, with our own drivers providing a personal, dependable experience.

We have also redesigned our website to make it easier and more enjoyable to use. Customers can now access their full order history, making reordering quick and hassle free. The website also features a growing collection of helpful product-focused videos, created to offer clear explanations and a personal touch. Alongside this, our highly trained and knowledgeable staff are always available by phone to talk through anything you may need. These updates represent just a portion of the improvements we continue to make, but we also work tirelessly behind the scenes to ensure our service, infrastructure and product range evolve with you in mind.

Looking ahead, we have many exciting developments and special offers planned. To make sure you hear about these first, we encourage you to keep your customer details—such as address, email and phone number—up to date. This helps us ensure that we can always provide the highest level of service and keep you informed about everything we have to offer.

Mobile Number (At least one number is required)

If your address does not have a house number or is hard to find then please provide us with additional information that will assist our drivers in making the delivery. If we are unable to contact you or our driver cannot locate the delivery address then we may abort the delivery and have to reschedule it for a later date.

Delivery timescales and charges are calculated using two pieces of information.

- 1) The physical size of the item
- 2) The area/zone it is being delivered to

You are only charged for the largest item on your order and not separately for each item. **For full details please see page 93**

You will find many of our products have additional discounts applied when ordering certain quantities. Products with quantity price breaks can be found online along with reduced to clear items in our sales section

The following credit & debit cards are accepted

☐ Cash ☐ Cheque ☐ Credit Card
